Figure S1. *In-situ* AFM image sequence of poly(NLS)/DNA polyplex (N/P = 2) disassembly in 0.4 M NaCl solution. 0.02 M DTT was added at time zero. All images are $2.6 \times 2.6 \mu\text{m}^2$ in scan size and 10 nm in z range.

Figure S2. *In-situ* AFM image sequence of poly(NLS)/DNA polyplex (N/P = 8) disassembly in 0.4 M NaCl solution. 0.02 M DTT was added at time zero. All images are $2.6 \times 2.6 \mu\text{m}^2$ in scan size and 12 nm in z range.
