

**Table S1.**—Presence/absence of 154 genes in the plastid genomes of diverse primary and secondary plastid-containing organisms, as well as a representative cyanobacterium. The column designated "Tree" indicates whether the *Cryptomonas paramecium* homolog branches with the cryptomonads *Rhodomonas salina* and *Guillardia theta* in a phylogenetic tree (T) or does not branch with sequences from these two species (F) (see main text). "+" = gene present, "-" = gene absent, "y" = pseudogene, "#" means the *C. paramecium* protein could not be analyzed in a phylogenetic tree. Abbreviations: orf; open reading frame, C.p; *Cryptomonas paramecium*, R.s; *Rhodomonas salina*, G.t; *Guillardia theta*, E.h; *Emiliania huxleyi*, O.s; *Odontella sinensis*, P.t; *Phaeodactylum tricornutum*, T.p; *Thalassiosira pseudonana*, P.p; *Porphyra purpurea*, Gr.t; *Gracilaria tenuistipitata*, C.c; *Cyanidium caldarium*, C.m; *Cyanidioschyzon merolae*, C.pa; *Cyanophora paradoxa*, C.r; *Chlamydomonas reinhardtii*, E.g; *Euglena gracilis*, B.n; *Bigelowiella natans*, A.m; *Aneura mirabilis*, E.l; *Euglena longa*, E.v; *Epifagus virginiana*, H.s; *Helicosporidium* sp., T.g; *Toxoplasma gondii*, P.f; *Plasmodium falciparum*, Syn; *Synechocystis* sp. PCC6803. Cp vs. Rs; pair-wise distances between *Cryptomonas paramecium* and *Rhodomonas salina* protein homologs, Cp vs. Gt; pair-wise distance between *Cryptomonas paramecium* and *Guillardia theta* protein homologs, Rs vs. Gt; pair-wise distance between *Rhodomonas salina* and *Guillardia theta* protein homologs.
