

**Supplementary Table 3.** Comparison of results from treatment of cells, with OMC (27 ppm) alone, OMC plus UV, and UV alone. Treatment groups are listed, together with indications of their associated significant changes, for each gene.

\* p<0.05; \*\* p<0.01; \*\*\* p<0.00. ↑ significantly up-regulated genes relative to untreated controls; ↓ significantly down-regulated genes relative to untreated controls
