

Figure S1. Western blot with anti-HA antibodies to detect the indicated HA-Bnr1p constructs. Arrows indicate reactive bands of the appropriate molecular weights.

Figure S2. Localization of GFP-Bnr1p-L1 and GFP-Bnr1p-L2 in a wild type strain and a *shs1* Δ strain lacking the non-essential septin.

Figure S3. The actin cytoskeleton is relatively normal in cells expressing 3GFP-Bnr1p Δ L1 or 3GFP-Bnr1p Δ L2. Cells stained with actin antibody are shown.
