

Supplementary Figure 1

Supplementary Figure 1: Phenotype of *msh1* and *recA3* mutants after heat stress of 37°C for approximately 24 hours. Pictures were taken 3 days after returning to 24°C following the heat treatment.

Supplementary Table 1: Putative stress responsive genes in the double mutant that do not correspond with induced heat tolerance

AGI	Col-0_2hr heat (Fold change)	Double Mutant_0hr (Fold change)	Gene Description
AT1G17170	0.69	4.28	GST (tau class)
AT5G42800	0.16	4.27	Dihydroflavanol reductase
AT1G03495, AT1G03940	0.6	3.91	Anthocyanin transferase
AT1G03495, AT1G03940	0.23	3.65	Leucoanthocyanidin dioxygenase
AT5G17220	0.21	2.73	GST (phi class)
AT3G16420, AT3G16430	0.58	2.56	PBP1
AT4G14090	0.53	2.3	Anthocyanidin 5-O-glucosyltransferase
AT1G52000	0.41	2.13	Jacalin lectin family protein

Supplementary Table 2: Primers used to amplify mitochondrial transcripts in qRT-PCR analyses.

Supplementary Table 3. List of genes with information regarding expression, relative to Col-0, in *msh1*, *recA3*, and *msh1 recA3*. Genes are considered altered in expression if p-value < 0.1 and absolute log fold change compared to wild type is greater than 1. Table available at <http://psiweb.unl.edu/mackenzie/supp/supp3.xls>

Supplementary Table 4. List of genes with information regarding expression, relative to Col-0 under normal conditions, in *msh1 recA3* under normal conditions, Col-0 under heat stress and *msh1 recA3* under heat stress. Genes are considered altered in expression if FDR < 0.1. Table available at <http://psiweb.unl.edu/mackenzie/supp/supp4.xls>
