Table S1. Immunohistochemistry staining criteria used to evaluate the total staining scores for the malignant lymphocytes in each CTCL biopsy

Intensity	
Epidermis and dermis	0: negative 1: weakly positive 2: moderately positive 3: strongly positive
Frequency	
Dermis	1: <5% positive 2: 25–50% positive 3: 50–75% positive 4: >75% positive
Epidermis infiltrate	0: none 1: few/sparse 2: many single 3: Pautrier's
Dermis infiltrate type	0: normal 1: patch 2: plaque 3: tumor
Total staining scores	1–13
Strong	≥6
Weak	<6
