

Figure S1. Breeding scheme for the five different HL genotypes generated.

Figure S2. Multiple sequence alignment of B6-, SPRET- and human-HL using Clustal W2 (www.ebi.ac.uk/clustalw/). * = identical residues. : = conserved substitutions. . = semi-conserved substitutions. ■ = substitutions between B6- and SPRET-HL only. □ = signal peptide. [] = Polycystin-1, Lipxygenase, Alpha-Toxin (PLAT) domain. ■ = active site. Bolded text = lid domain. Underlined = heparin binding.

Figure S1.

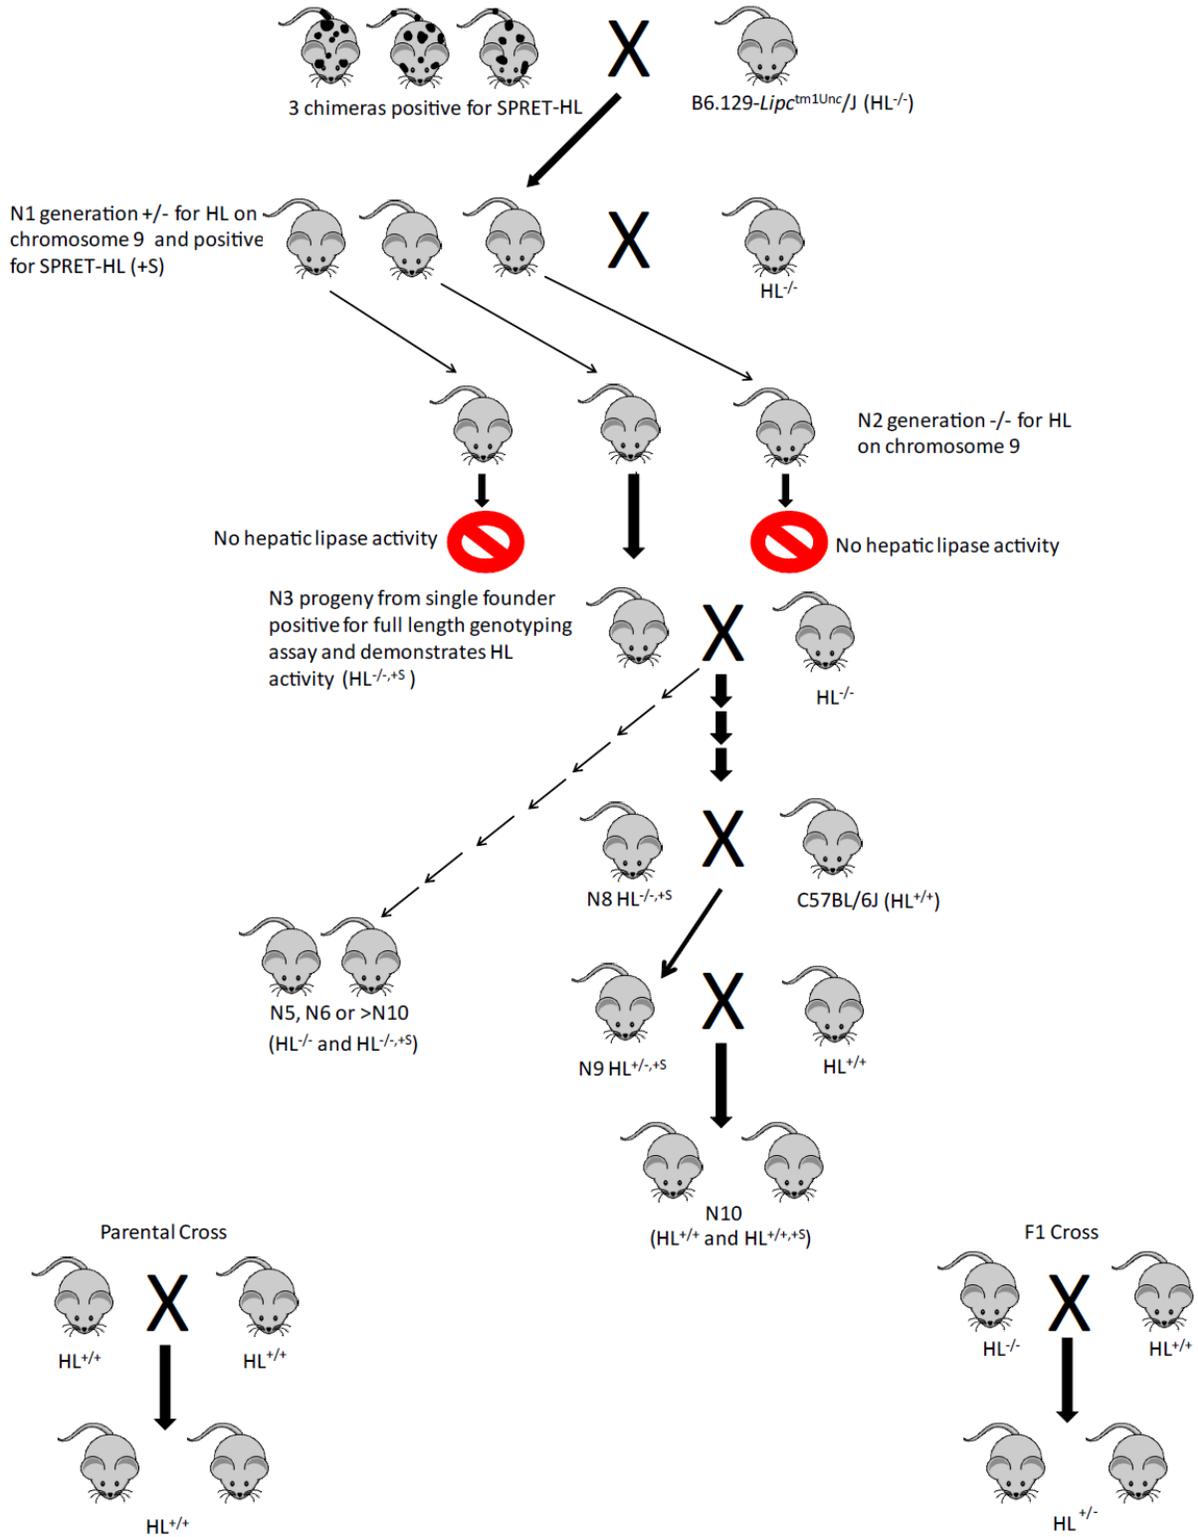

Figure S2.
