

Figure S1; Analysis of the presence of the *AhMTP1* paralogues in 44 plants from the Auby accession using gene copy specific primer pairs. Each of the horizontal panel show the amplification obtained from a primer pair specific to the *MTP1* paralogue named at the left of the panel. Samples from BAC clones 1F18, 2B14, 7G24 and 12L21 were used as controls for specificity of the primer pairs. The lane M represents 1kb invitrogen DNA ladder.
