

Table S1. Growth of wild type and revertants in TSB supplemented with maltose or maltodextrin, respectively. Indicated is the optical density at 600 nm after 24 hrs. at 37 °C, means from three independent experiments.

Strain	TSB+25 mM maltose	TSB+ 1% maltodextrin
Wild type	0.85 ± 0.08	1.10 ± 0.10
Revertant Ins2123	0.84 ± 0.05	1.05 ± 0.11
Revertant Ins2126	0.85 ± 0.06	1.05 ± 0.09
Revertant Ins2128	0.86 ± 0.05	1.07 ± 0.10
Revertant Ins0278	0.86 ± 0.08	1.08 ± 0.11
