

Supplemental Figure 2. Cells in the bone marrow do not express α -myosin heavy chain promoter-driven green fluorescent protein. (A) Whole bone marrow from a Sca-1 knockin mouse expressing GFP under control of the endogenous Sca-1 promoter is GFP positive by flow cytometric analysis. Whole bone marrow from **(B)** NTG, **(C)** $_{MHC}$ GFP and **(D)** $_{MHC}$ Pim-wt do not express GFP by flow cytometric analysis.

GFP: Green fluorescent protein; MHC: Myosin heavy chain; NTG: Nontransgenic.
