

**Figure 1 (On-Line).**

A) Arachidonic acid–induced platelet aggregation before and after the hyperglycemic clamp. Platelet aggregation was induced with increasing concentrations of arachidonic acid (0.3, 0.4 and 1 mM).

B) Collagen (1µg/mL) – induced platelet aggregation, before (pre) and after (past) the hyperglycaemic clamp.

\*p<0.05 vs Placebo; § p< 0.05 vs Aspirin.
