Supplemental Table 4. Confirmation of microarray data by real-time PCR.

The samples collected for the microarray analysis were subjected to real-time PCR analysis. Randomly selected genes were chosen from Supplemental Tables 1, 2 and 3. The primers were designed to amplify a product with a size of 150 -250 bases and real-time PCR performed as described in the *Materials and Methods*. Expression of each mRNA was standardized against GAPDH as a housekeeping gene and analyzed by the $2^{-\Delta\Delta CT}$ method .
