

Web Appendix

Shows the causes of death for all the study participants as classified in Danish Cause-of-Death Registers. From this list a specialist in infectious diseases initially defined those included in the broader definition of infectious diseases. The list was secondly revised by a specialist in internal medicine and in case of disagreement the categorization was discussed until consensus. In the right column it is indicated whether the specific ICD code was classified as infectious (=1) or not (=0) in the present study.
