Dias ATC, van Ruijven J, Berendse F. Plant species richness regulates soil respiration through changes in productivity. Oecologia.

Electronic Supplemental Material 1 Scatterplots and correlation matrix for the variables included in the path models. Pearson correlation coefficients are shown (*$P<0.05$; **$P<0.01$). All variables were Log-transformed.

	Species richness	Soil temperature	Biomass	Leaf N$_{aggr.}$	Soil respiration
Species richness		$r = -0.04$	$r = 0.57$**	$r = -0.48$**	$r = 0.25$*
Soil temperature			$r = -0.04$	$r = -0.08$	$r = 0.32$**
Biomass				$r = -0.55$**	$r = 0.47$**
Leaf N$_{aggr.}$					$r = -0.29$*
Soil respiration
