

Supplementary Table 2. Complementation by integrated *CNM67-GFP* and *SPC42-GFP*

Genotype	Strain	% Sporulation
<i>SPC42</i>	AN120	90.8
<i>SPC42-GFP</i>	EMD85	84.8
<i>CNM67</i>	AN120	90.8
<i>CNM67-GFP</i>	EMD6	85.0

Cells were induced to sporulate. After two days, 200 cells were analyzed for sporulation in each condition. Numbers represent the averages of two experiments. Complementation by the GFP-tagged proteins is indicated by maintaining the sporulation efficiency as compared to wild-type.
