

Supporting Information

Romero et al. 10.1073/pnas.1006991107

Table S1. Variables in the best GLMM explaining the occurrence of consolation according to conflict characteristics

Variables	Variance	β	SE	z	P	OR	95% CI
Fixed							
Intercept		-0.488	0.338	-1.443	0.149		
Reconciliation		-0.781	0.175	-4.448	<0.001	0.46	0.33–0.64
Victim's rank							
High vs. low rank		0.724	0.354	2.047	0.040	2.06	1.03–4.13
Medium vs. low rank		0.849	0.302	2.812	0.004	2.33	1.29–4.22
Random							
Victim	0.3141						
Aggressor	0.0221						

OR, odds ratio; CI, confidence interval.

Table S2. Variables in the best GLMM explaining the occurrence of consolation according to consoler and recipients characteristics

Variables	Variance	β	SE	z	P	OR	95% CI
Fixed							
Intercept		-3.490	0.374	-9.313	<0.001		
Kinship		1.189	0.163	-7.287	<0.001	0.30	0.22–0.42
Affiliation level		0.370	0.134	2.756	0.005	1.44	1.11–1.88
Consoler's sex		1.507	0.450	3.347	<0.001	4.51	1.86–10.9
Consoler's sex \times consoler's rank							
Medium-rank female vs. high-rank female		0.697	0.440	1.584	0.113	2.01	0.84–4.76
Medium-rank male vs. high-rank male		-1.901	0.496	-3.831	<0.001	0.15	0.05–0.30
Low-rank female vs. high-rank female		0.158	0.350	0.452	0.651	1.17	0.59–2.33
Low-rank male vs. high-rank male		-1.634	0.388	-4.206	<0.001	0.19	0.09–0.41
Random							
Victim	0.3602						
Consoler	0.1167						

OR, odds ratio; CI, confidence interval.
