

**Supplemental Table 1. Institutions and Investigators: Childhood Cancer Survivor Study (CCSS)**

The CCSS is a collaborative, multi-institutional project, funded as a resource by the National Cancer Institute (NCI), of individuals who survived 5 years or more after a diagnosis of childhood cancer. CCSS is a retrospectively ascertained cohort of 20,346 childhood cancer survivors who were diagnosed when younger than age 21 years between 1970 and 1986 and approximately 4000 siblings of survivors who serve as a control group. The cohort was assembled through the efforts of 26 participating clinical research centers in the United States and Canada. The study is currently funded by a U24 resource grant (NCI grant U24 CA55727) awarded to St. Jude Children's Research Hospital. Currently, we are in the process of expanding the cohort to include an additional 14,000 childhood cancer survivors who were diagnosed when younger than age 21 years between 1987 and 1999. For information on how to access and utilize the CCSS resource, visit [www.stjude.org/ccss](http://www.stjude.org/ccss).
