## SUPPLEMENTAL TABLES

**Supplemental Table 1.** Complete Gene List, Housekeeping Genes, Gene Function, and Criteria for Study Selection

**Supplemental Table 2.** Gene Expression Levels. Expression levels with and without normalization for housekeeping genes (delta Ct values and raw values, respectively) for platelets and leukocytes.

## SUPPLEMENTAL FIGURE LEGENDS

### SUPPLEMENTAL FIGURE LEGENDS

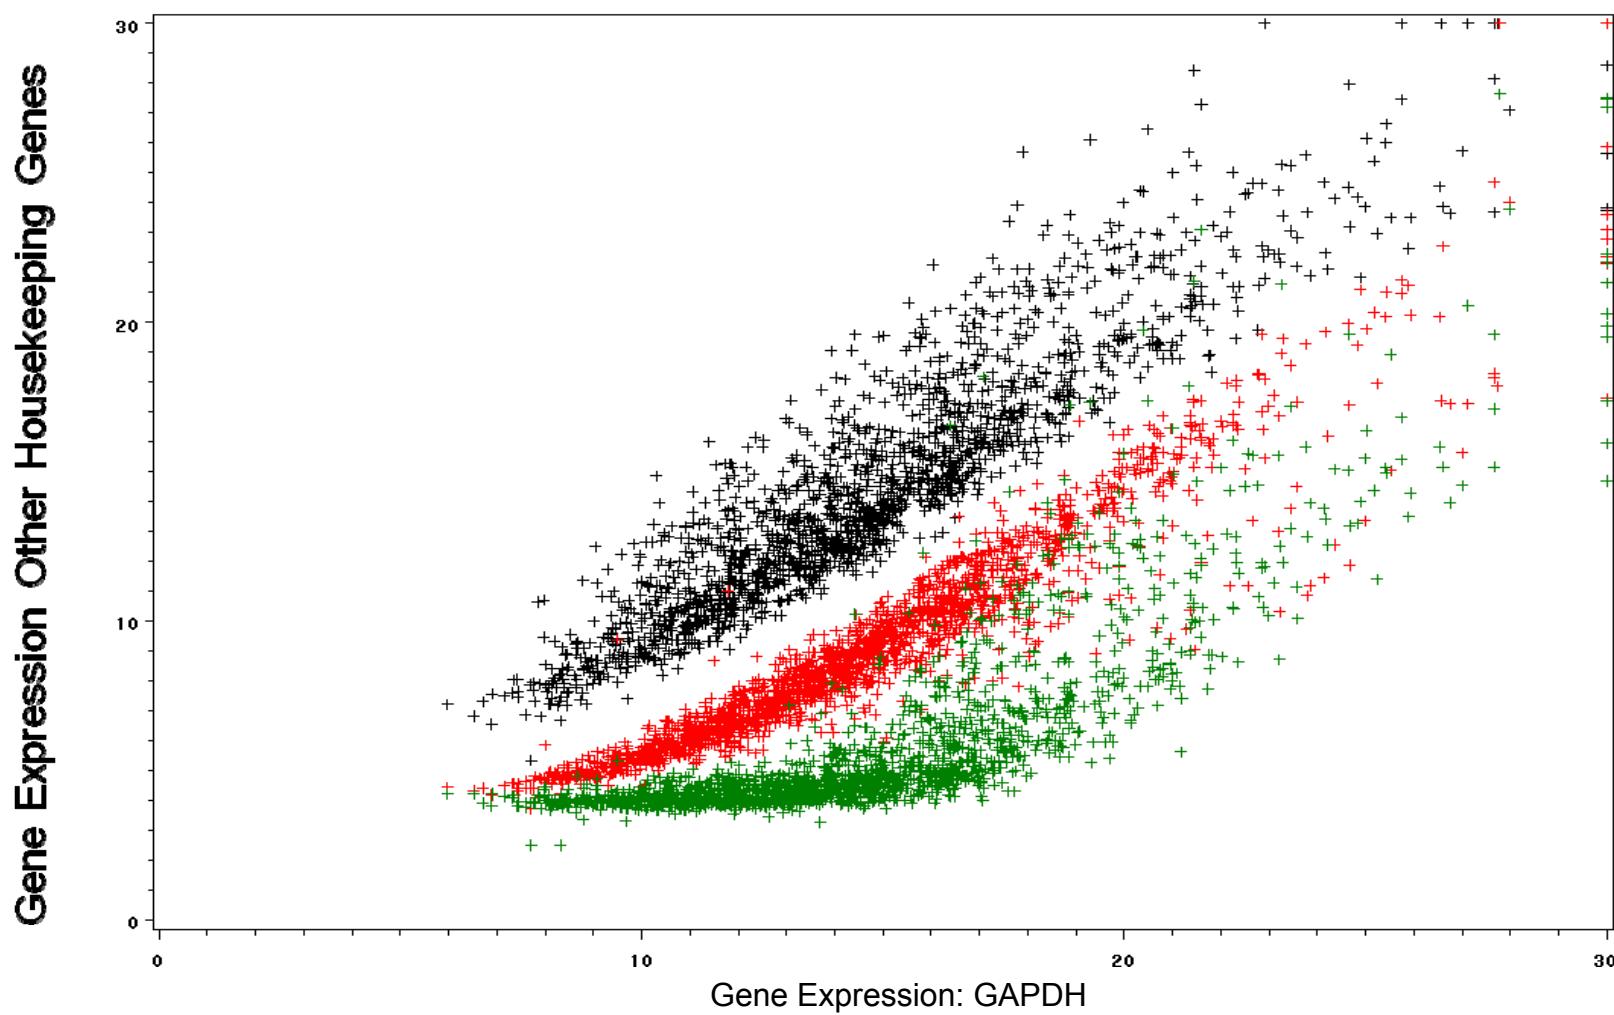

**Supplemental Figure 1. Housekeeping Gene Expression.** Platelet (Supplemental Figure 1a) and leukocyte (Supplemental Figure 1b). RNA expression from four reference genes were measured; beta actin (*ACTB*; black), beta-2-microglobulin (*B2M*; red), and eukaryotic ribosomal protein 18S (*18S*; green) were plotted against glyceraldehyde-3-phosphate dehydrogenase (*GAPDH*).

**Supplemental Figure 2. Age and Difference in Mean Gene Expression in Isolated Circulating Cells.** Platelet (Supplemental Figure 2a) and leukocyte (Supplemental Figure 2b) The blue line (open circle) represents the difference in predicted delta CT values between 60-69 age group and youngest age group. The red line (closed circle) is the difference in predicted delta CT values between the 70+ age group and youngest age group. Delta CT is gene-specific CT – housekeeping CT.

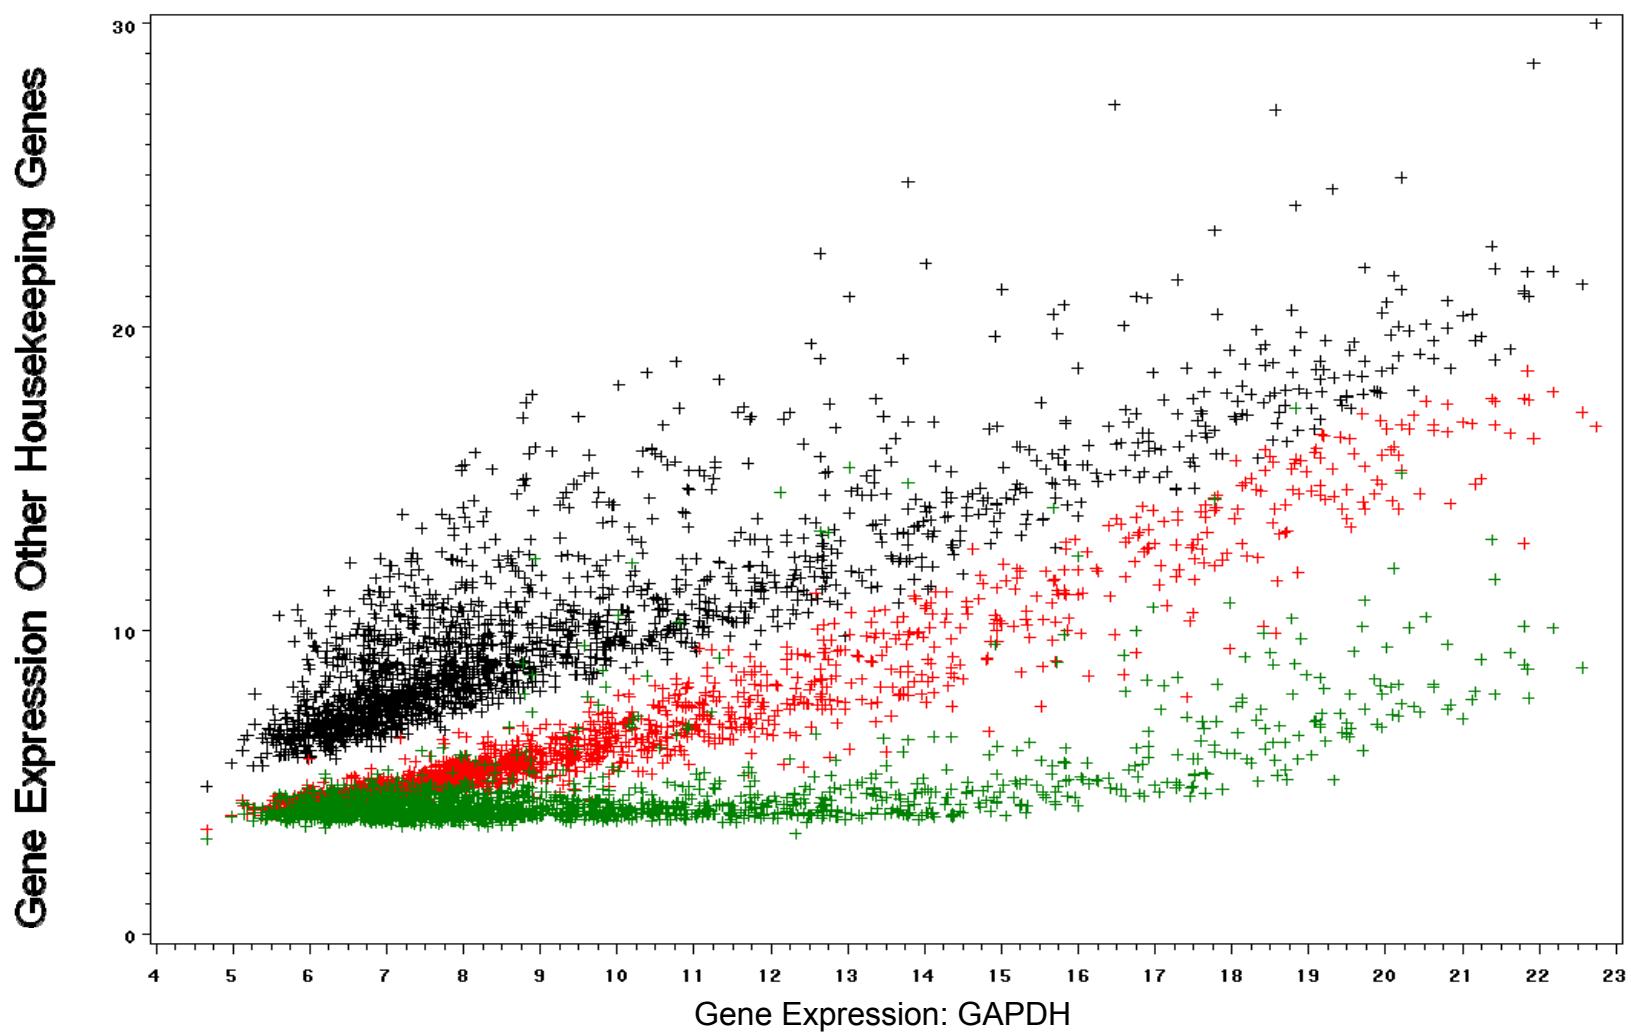

**Supplemental Figure 3. Sex and Difference in Mean Gene Expression in Isolated Circulating Cells.** Platelet (Supplemental Figure 3a) and leukocyte (Supplemental Figure 3b). The line represents difference in predicted delta CT values of male to female. Delta CT is gene-specific CT – housekeeping CT.

**Supplemental Figure 4. Waist Circumference and Difference in Mean Gene Expression in Isolated Circulating Cells.** Platelet (Supplemental Figure 4a) and leukocyte (Supplemental Figure 4b).

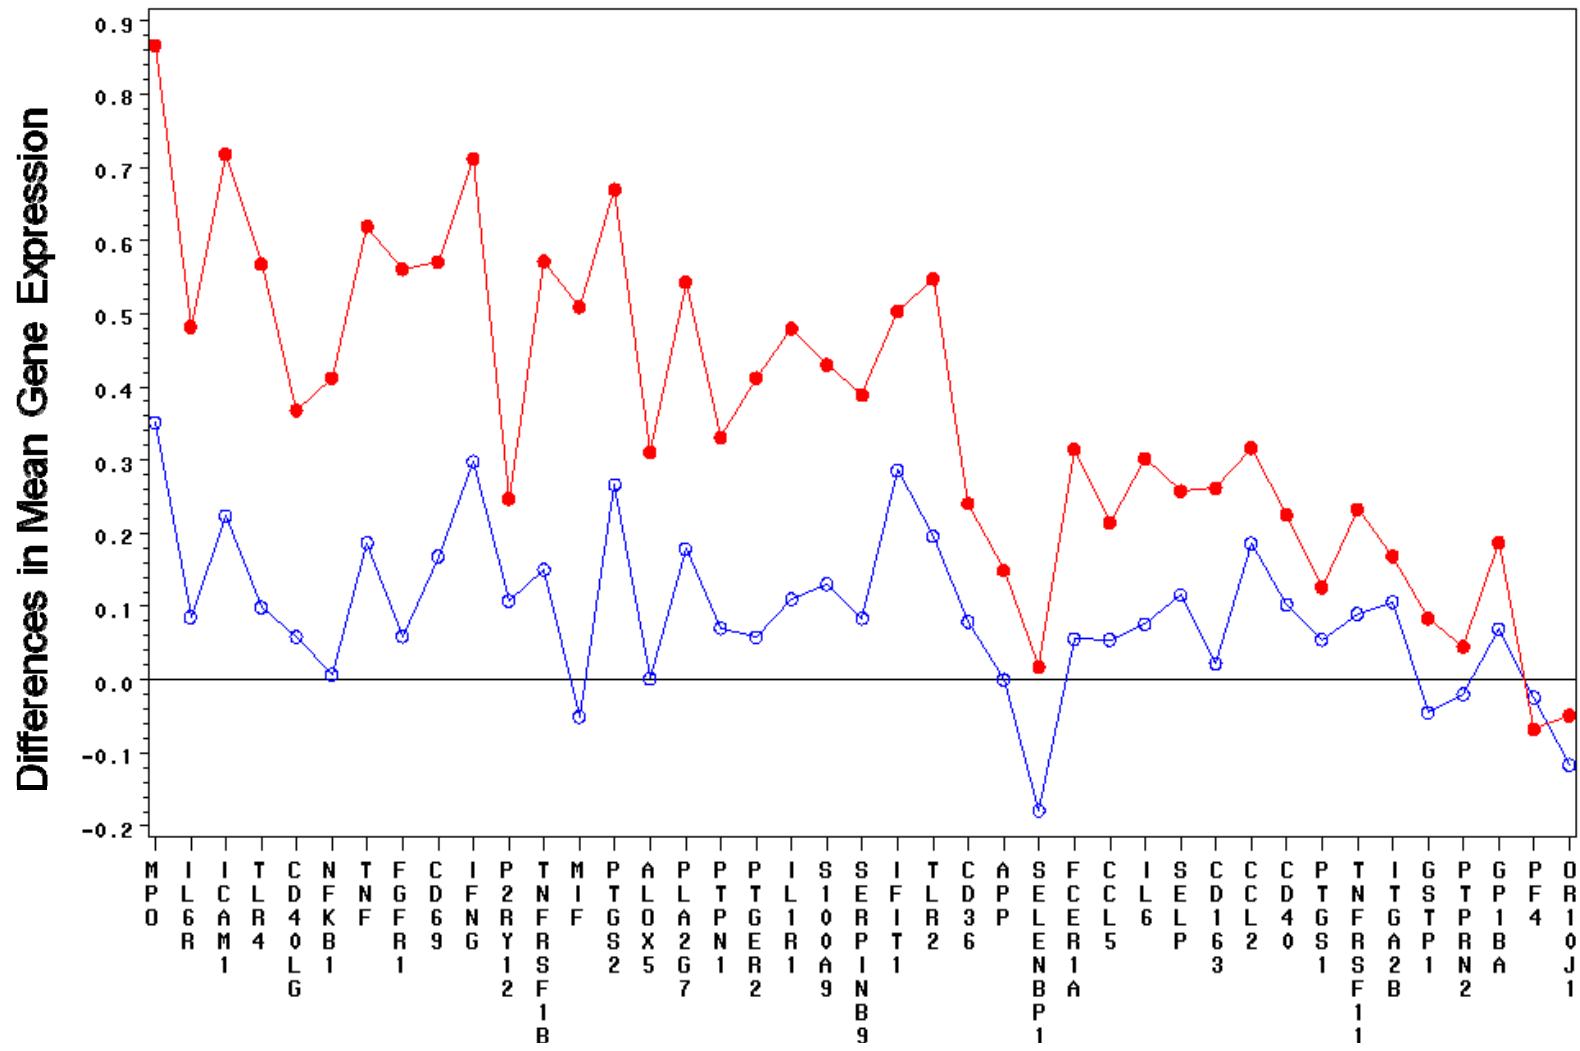

**Supplemental Figure 5. Coronary Disease and Difference in Mean Gene Expression in Isolated Circulating Cells.** Platelet (Figure 5a) and leukocyte (Figure 5b). The line is least squares mean of delta CT values of those with coronary disease compared to those with no coronary disease. Delta CT is gene-specific CT – housekeeping CT.
