

Supplemental Fig. 5. Relationship between C20 staining results and mRNA levels for *EpoR* and *Hsp70*. The results of previously described tumor characterization with the C20 rabbit polyclonal anti-EpoR antibody (13) are shown in comparison to mRNA levels of A, *EpoR* and B, *Hsp70* family members (see next page). Spearman's correlation coefficients (r) are indexed.
