Flag-ADHter FS 5' ata cgt cga cca gac tac aag gat gac gat gac aag taa aag ctt tgg act tct tcg cca 3'

ADHter RNot 5' at atc ata gcggccgc gtg tgg aag aac gat tac aac ag 3'

**Supplemental Figure 1.** Effect of cysteine or SO<sub>4</sub><sup>2-</sup> on the interaction between OASTL and 1;2STAS  
 (A) 1 mM OAS increases interaction of OASTL with 1;2STAS while 1 mM cysteine does not have a significant effect on binding. *In vitro* binding assay was performed as described in Fig. 2 or in Experimental procedures. (B) Addition of 0-2.0 mM SO<sub>4</sub><sup>2-</sup> to the reaction including 1 mM OAS does not alter the binding efficiency of STAS or LSTAS of SULTR1;2 to OASTL.

**Supplemental Figure 2.** Effect of the K46A mutation in OASTL on the interaction between OASTL and 1;2STAS (A) Interaction of SULTR1;2LSTAS with OASTL39M or OASTL39M containing the K46A or H221A mutation in yeast two-hybrid system. (B) Binding of OASTL with the K46A mutation to the STAS protein of SULTR1;2 in the *in vitro* binding assay is similar to that shown in Figs. 2A-B.
