

Supplementary Figure 1 Chen *et al.*

Supplementary Fig. 1. HCT-8 cells were cultivated in 10% or 0.5% FCS-containing RPMI medium for 3 or 5 days. The media were collected, centrifuged, and filtered through 0.45- μ m filters (Millipore). The filtered media were used for the lactate dehydrogenase activity assay according to the manufacturer's instructions (Sigma). The data are the mean \pm SD of three independent experiments. Each experiment was performed in triplicate.
