

LUDLU1

Supplementary figure 1: Complete copy number karyogram from cell line LUDLU-1 normalised against normal counterpart AGLCL. Each plot is of haploid copy number equivalent versus chromosomal position.

Supplementary figure 2: Example of the reproducibility of the method. Analysis on 4 tumour:normal pairs was replicated on lanes 1 and 2 of an Illumina GAI run. Chromosome 2 from sample LS010 is shown in replicate (a and b) as well as chromosome 1 from sample LS041 (c and d).
