

Figure S2. Data and model estimates of ITN use in children under 5 coverage for 44 African countries.

Data are: survey estimates during the rainy season (red diamonds); and survey estimates during the dry season (yellow diamonds). Model estimates at the national-level are shown as blue lines with dotted lines indicating 95% uncertainty intervals. Model estimates for the population at risk malaria are shown as green lines with dotted lines indicating 95% uncertainty intervals. Years indicate the mid-point of the calendar year. Note that not all symbols are present for each country.
