

Supplementary Information Figure S1

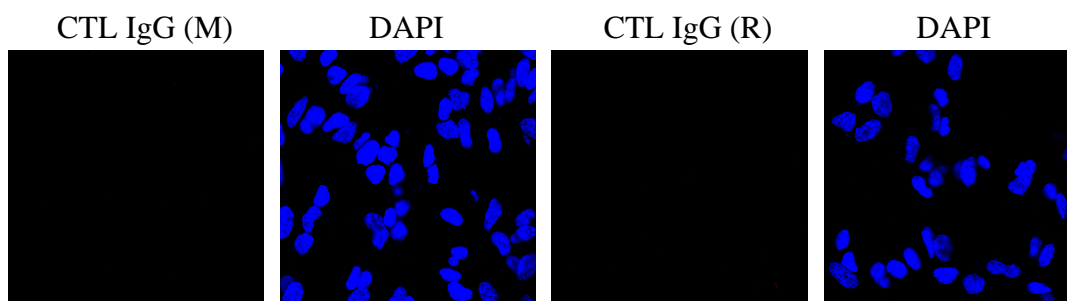

Figure S1 Subcellular localization of NRP/B and Nrf2 upon H₂O₂ treatment: SH-SY5Y cells were plated on coated glass slides and treated with H₂O₂ for 12 hr, fixed and immunostained with anti-Nrf2, anti-NRP/B (VD2) antibodies and DAPI. The images were taken using a confocal microscope (Zeiss LSM 510 Meta). (Lower panel) Test of antibody specificity. SH-SY5Y cells were plated on coated glass slides and treated with H₂O₂ for 12 hr, fixed and immunostained with mouse and rabbit IgG antibodies (control). M: mouse. R: rabbit.
