

Supplemental Fig. 3 The dispersed, round structures observed in the $\Delta Aovps10$ strain are not colocalized to the endosomes. The strain SIDv10-CG, which expressed AoCpyA-EGFP, was cultivated in CD medium adjusted to pH 5.5 at 30°C for 18 h. The culture was stained by FM4-64, and was observed by differential interference contrast (DIC) and confocal laser microscopy. Bar, 5 μ m.
