

Supplementary Material

Figure legends

Figure S1

(a) PCR of genomic DNA confirming excision by Cre recombinase of the floxed alleles in Fh1 deficient (Fh1 $-/-$) MEFs. **(b)** Immunoblot analysis confirming the loss of Fh1 protein in Fh1 $-/-$ MEFs.

Figure S2

Cartoon illustrating the strategy for generation of transgenes encoding either a full length or an FH sequence lacking the amino-terminal MTS (FH Δ MTS) by PCR.
