

Figure S1. Network characteristics. A, The scatter plot of edges, $\log(k)$, versus the probability of a node having k edges, $P(k)$. Negative linear correlation indicates scale-free behavior. B, The scatter plot of k versus the average connectivity of any node having k edges, $C(k)$. Negative linear correlation indicates a hierarchical nature.

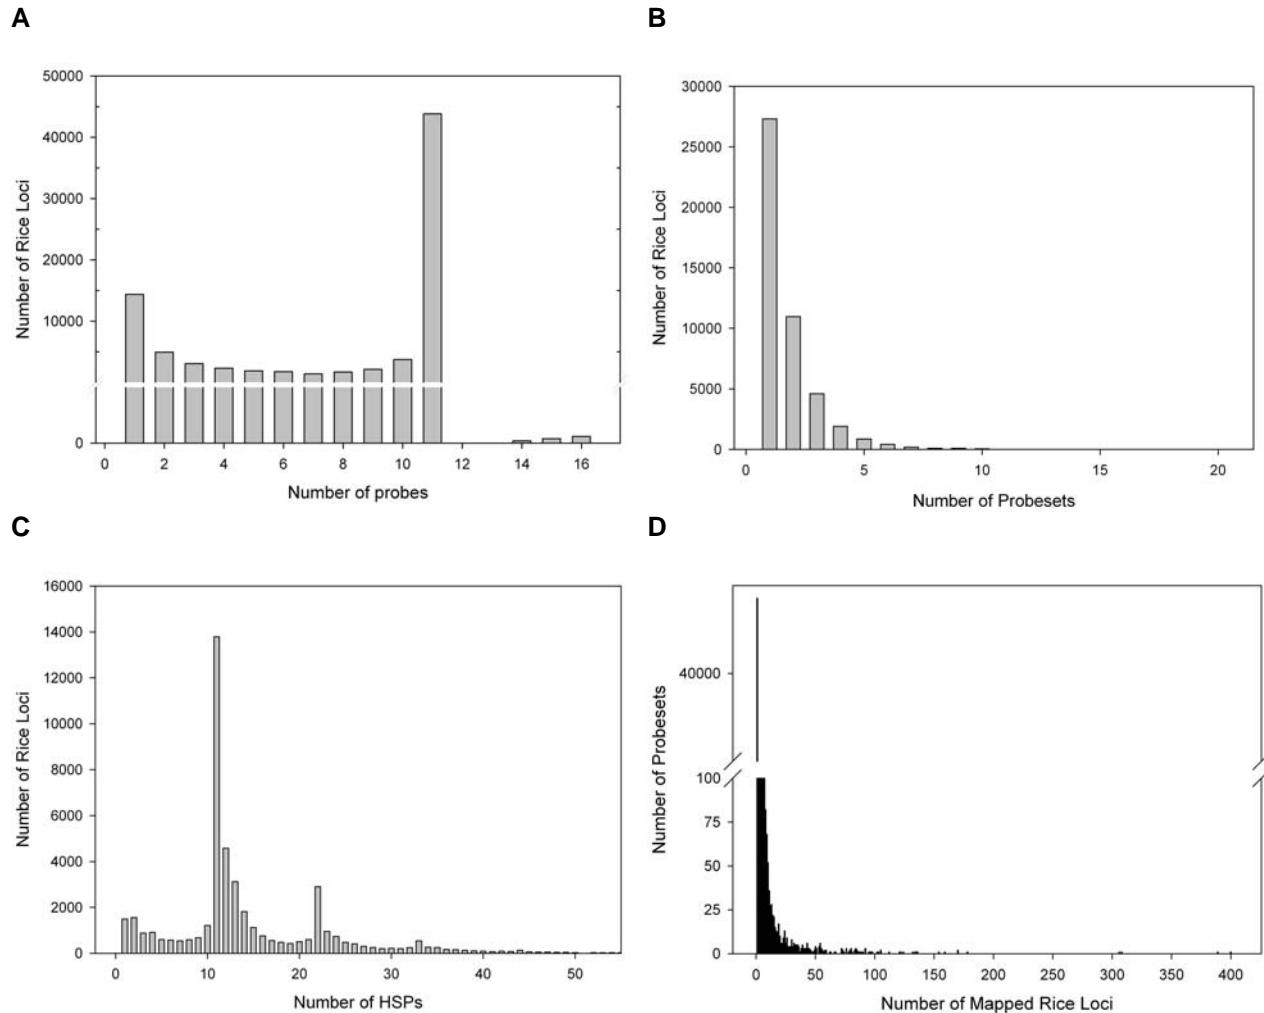

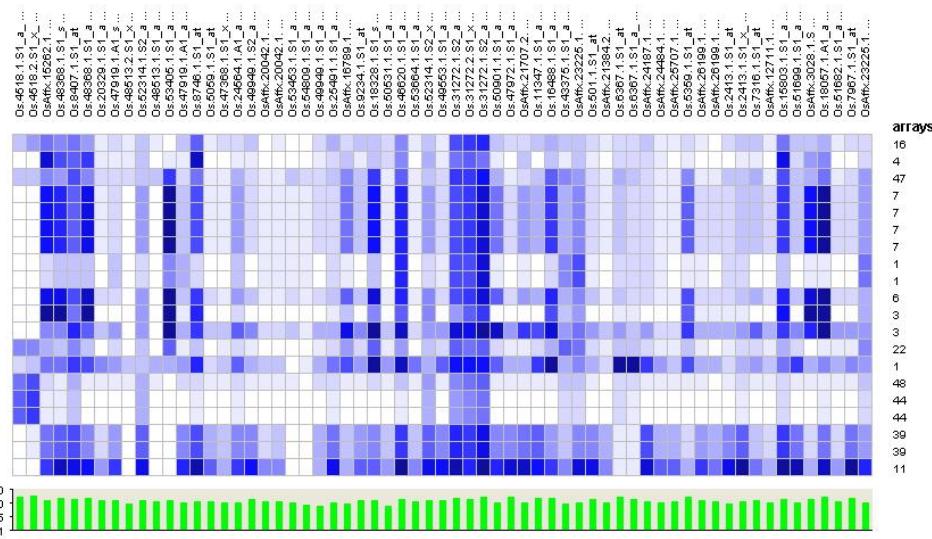

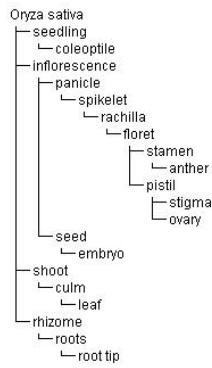

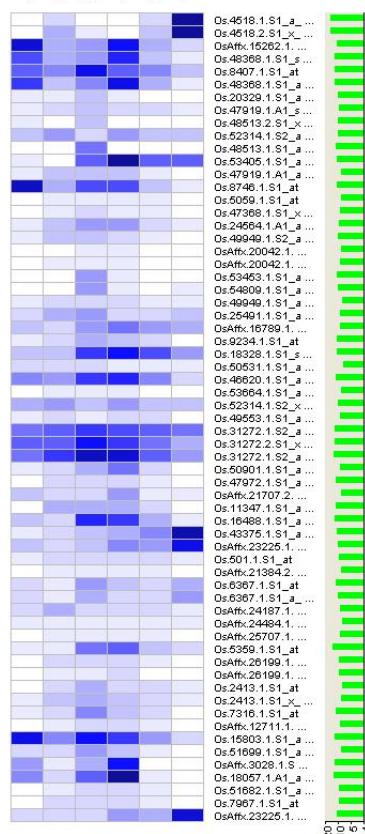

Figure S2. Affymetrix rice probeset mapping to rice loci. A, The distribution of the number of probes that map to a given number of rice loci. B, The number of rice loci that map to one or more probe sets. C, The distribution of high scoring segment pairs (HSPs) mapped to rice loci. D, The number of probe sets that map to individual rice loci.
