

SUPPLEMENTAL DATA

Fig. S1. Pof6 protein's domains.

A. Alignment of several F-box protein domains from *S. pombe* (Pop1, Pof1, Pop2, Pof6) and human (Skp2). The sequences are aligned according to the residues conserved at the core interface of Skp1/Skp2 and Cul1/Skp2 as described in Schulman et al., 2000 [1] (residues underlined with bold stars). The amino acids conserved at the variable interface of Skp1/Skp2 are underlined with regular stars. A consensus sequence of the F-box domain is written in the line below the alignment. The two residues in red are not conserved in Pof6 and correspond to the core interface of Cul1/F-box domain [2]. *B.* Schematic of the domains identified in the Pof6 protein by NCBI specialized Blast search; F-box domain (blue): aa 33-77, two Sec10 domains (red): aa 211-430 and aa 541-824, CAAX domain (dark red): aa 852-872.
