

## Supplemental Figure I

A

B

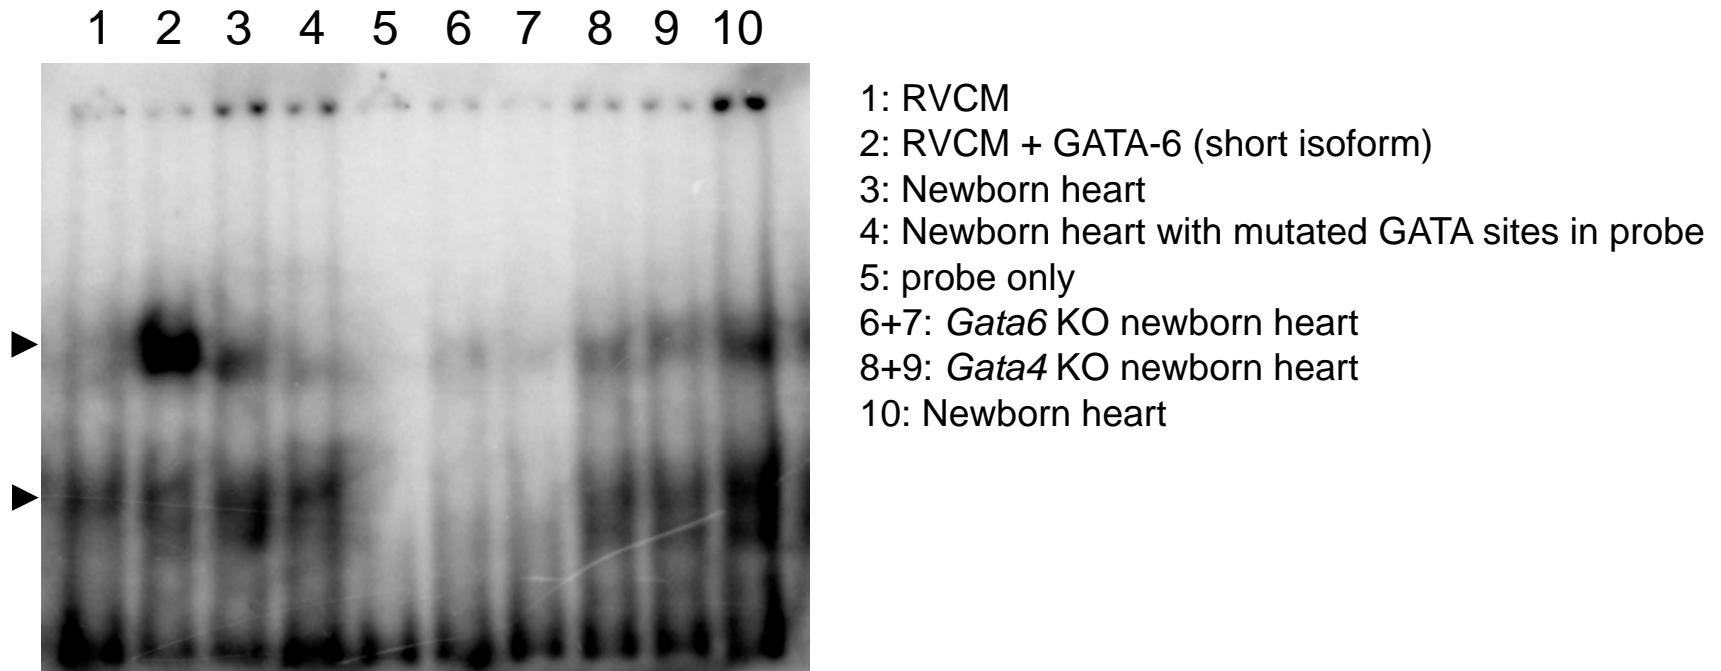

C

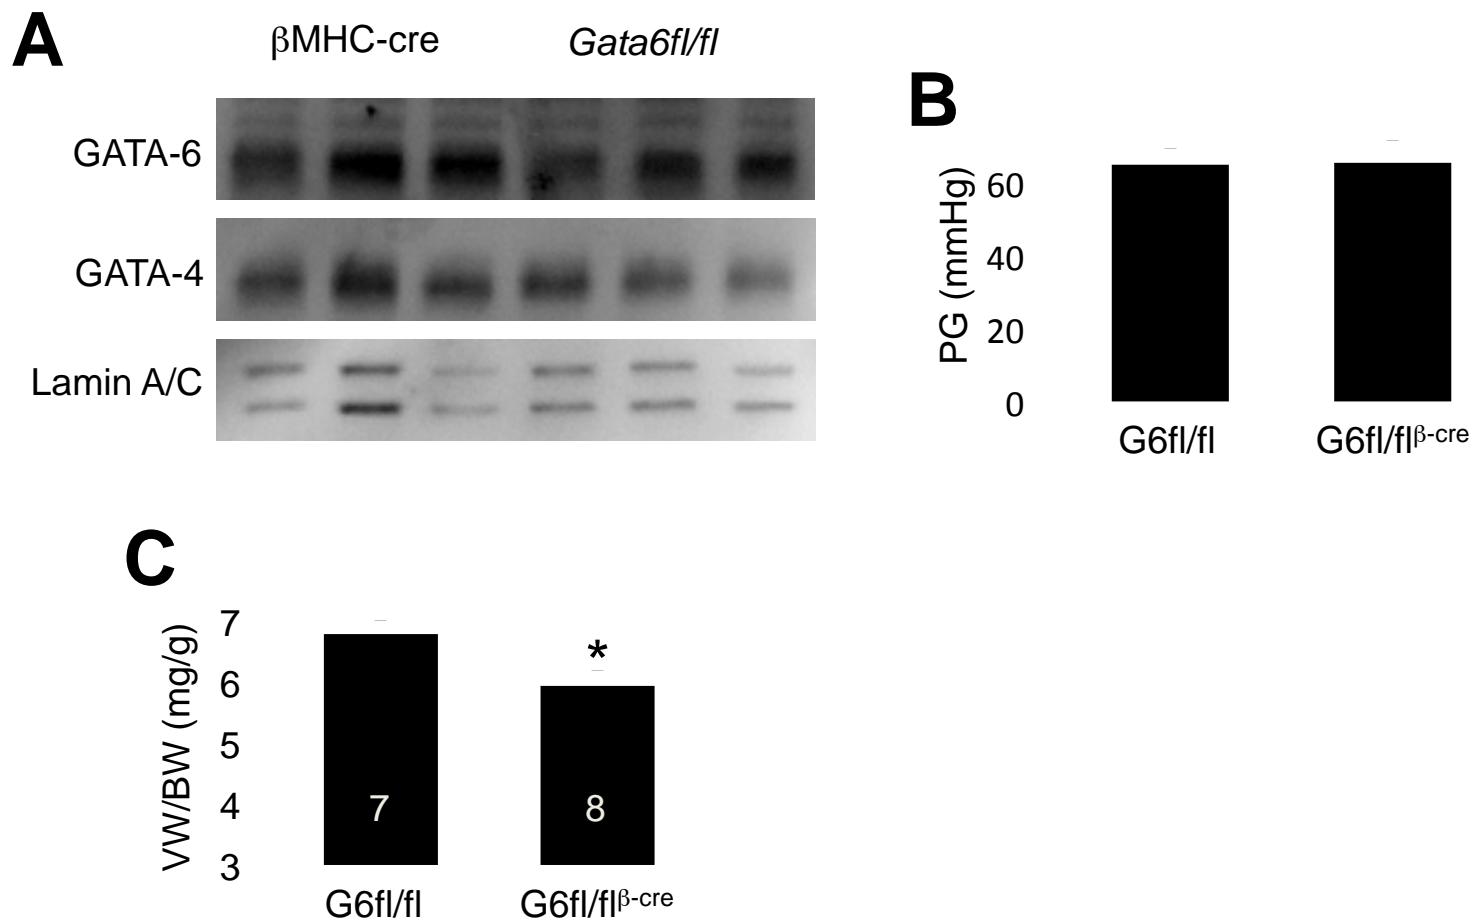

**Supplemental Figure I.** Developmental phenotype of *Gata6<sup>fl/fl</sup>Nkx2.5-cre* mice. A. Western blot for GATA-6 and GATA-4 from cardiac protein lysates from embryo's at day 14.5. B. Survival curve of wildtype and *Gata6*-deleted embryo's. Time is indicated in embryonic developmental day after conception. C. Immunohistochemistry of control and *Gata6<sup>fl/fl</sup>Nkx2.5-cre* embryo's at E16.5 showing ventricular septum defect (arrow) and thinned (arrowhead) septum in *Gata6*-deleted embryos.

## Supplemental Figure II

**Supplemental Figure II.** Gel shift for total GATA DNA binding activity in the adult heart of *Gata6* and *Gata4* heart-specific KO mice. The data show that loss of GATA-6 from the heart reduces total GATA DNA binding activity better than loss of GATA-4. Control samples are from newborn hearts and rat ventricular myocytes with and without infection with AdGATA-6 adenovirus as a migration marker of GATA-6 on the gel shift. A probe only negative control is also shown where the GATA binding sites are mutated. Arrows indicate specific GATA binding activity.

## Supplemental Figure III

**Supplemental Figure III.** A, Western blot for GATA-6 and GATA-4 of nuclear extracts from  $\beta$ MHC-Cre and *Gata6*fl/fl shows equal GATA-6 expression (i.e. the loxP allele is not hypomorphic). B, Doppler echocardiography 1 day after TAC surgery to measure pressure gradients across the constriction shows equal gradients between *Gata6*fl/fl and *Gata6*fl/fl $^{\beta\text{MHC-Cre}}$ . C, 1 week after induction of pressure overload in the same mice shown in B, *Gata6*fl/fl mice again show significantly higher ventricular/body weight ratio's than *Gata6*fl/fl $^{\beta\text{MHC-Cre}}$  mice (\* p<0.05).

## Supplemental Tables

**Supplemental table I.** Assessment of cardiac dimensions and function of 1 year-old mice of indicated genotypes, measured by M-mode echocardiography.

Genotype	Number of mice	IVS (mm)	LVPW (mm)	LVED (mm)	LVES (mm)	FS (%)
<b>β-Cre</b>	13	0.94±0.03	1.00±0.02	4.08±0.13	2.76±0.15	32.7±1.7
<b>G6fl/fl</b>	17	0.95±0.03	1.01±0.02	3.93±0.09	2.63±0.08	33.3±0.8
<b>G6fl/flβ-Cre</b>	8	0.93±0.05	0.96±0.03	4.21±0.12	2.86±0.13	32.2±1.5

Abbreviations: IVS, interventricular septum; LVPW, left ventricular posterior wall; LVED, left ventricular end diastolic dimension; LVES, left ventricular end systolic dimension; FS, fractional shortening.

**Supplemental table II.** Assessment of cardiac dimensions and function up to 6 weeks after TAC, measured by M-Mode echocardiography, \*p<0.05 G6fl/flβ-Cre vs β-Cre at the same time point, †p<0.05 G6fl/flβ-Cre vs G6fl/fl, ‡p<0.05 G6fl/fl vs β-Cre.

Genotype	Week	IVS (mm)	LVPW (mm)	LVED (mm)	LVES (mm)	FS (%)
<b>β-Cre</b> (N=16)	0	0.79±0.02	0.92±0.02	4.02±0.08	2.62±0.07	33.1±0.7
	2	1.14±0.04	1.28±0.04	3.41±0.10	2.26±0.08	33.9±0.9
