

MCF-7

MCF-7/ADR

Low confluence

High confluence

Supplementary Figure 4. Morphology of MCF-7 and MCF-7/ADR cells grown at low and high cell density. Cells were photographed at 20x magnification with an inverted phase-contrast microscope (Olympus CKX31 microscope, Germany). MCF-7 cells at low confluence have a cobblestone appearance. **Left** MCF-7 cells. **Right** MCF-7/ADR cells. **Upper** Cells at low confluence. Cells were photographed 3 days after plating. **Lower** Cells at higher confluence 7 days after plating. For upper panels, 2 x 10⁵ cells were plated, and for lower panels, 1 x 10⁶ cells were plated. Scale bar = 20 μ m.
