Supplemental Figure S1. Comparison of relative DNA contents by flow cytometry.

Supplemental Figure S2. Analysis of scaffold 00254.

Supplemental Figure S3. Comparison between *T. parvula* genomic sequences TP-1 and TP-2 with three orthologous genomic regions in *A. thaliana* and *T. salsuginea*.

Supplemental Figure S4. Syntenic relationships and homologies of sequences represented by percent identity plots (pip).

Supplemental Figure S5. Hairpin structures in the 5'UTR of the halophytic *Thellungiella* species.

Supplemental Figure S6. Comparison of CT tracts in the 5'UTRs of various genes between the three species.

Supplemental Table S1. ORFs identified in TP-1, AT-1 and TS-1.

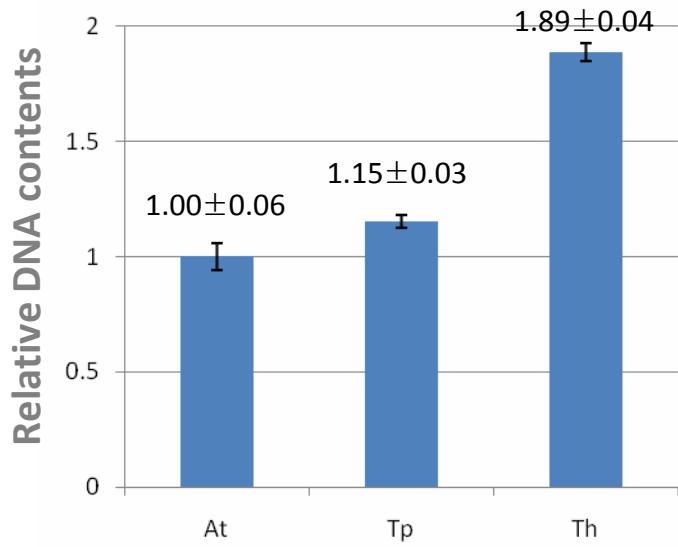

Supplemental Table S2. ORFs identified in TP-2, AT-2 and TS-2.

Supplemental Table S3. Comparison of ratio of non-synonymous (**Ka**) vs. synonymous (**Ks**) substitution rates in orthologous genes and the estimated divergence time of three species.

Supplemental Table S4. Comparison of relative gene expression levels by qPCR.

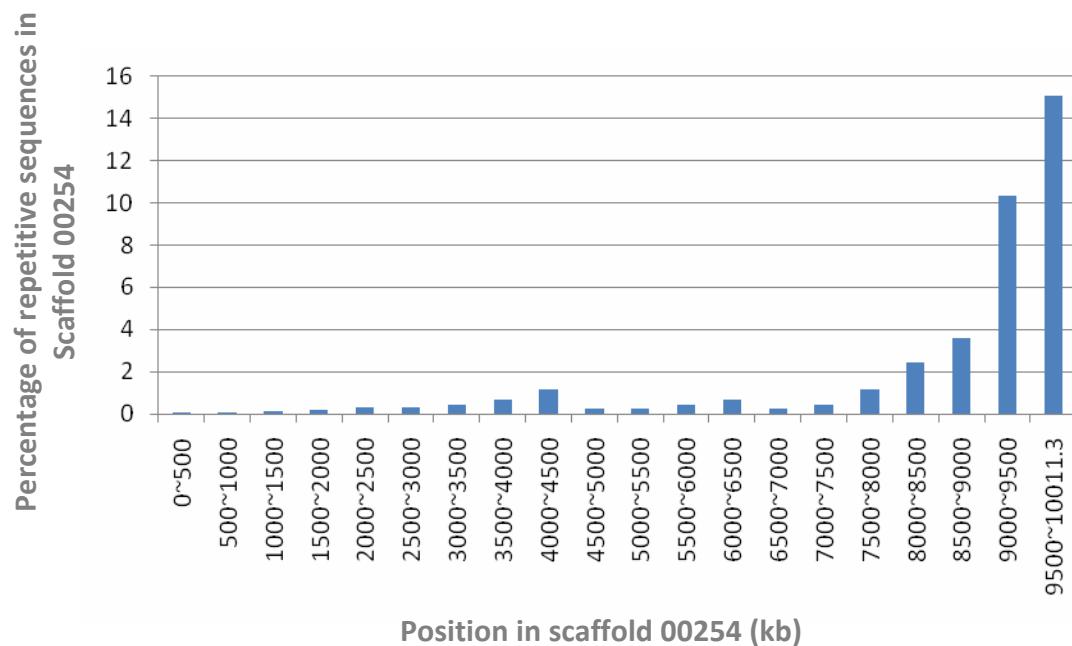

Supplemental Table S5. Known *cis*-elements in SOS1 promoter regions up to 2000bp upstream of the translation start site.

Supplemental Table S6. List of PCR primers.

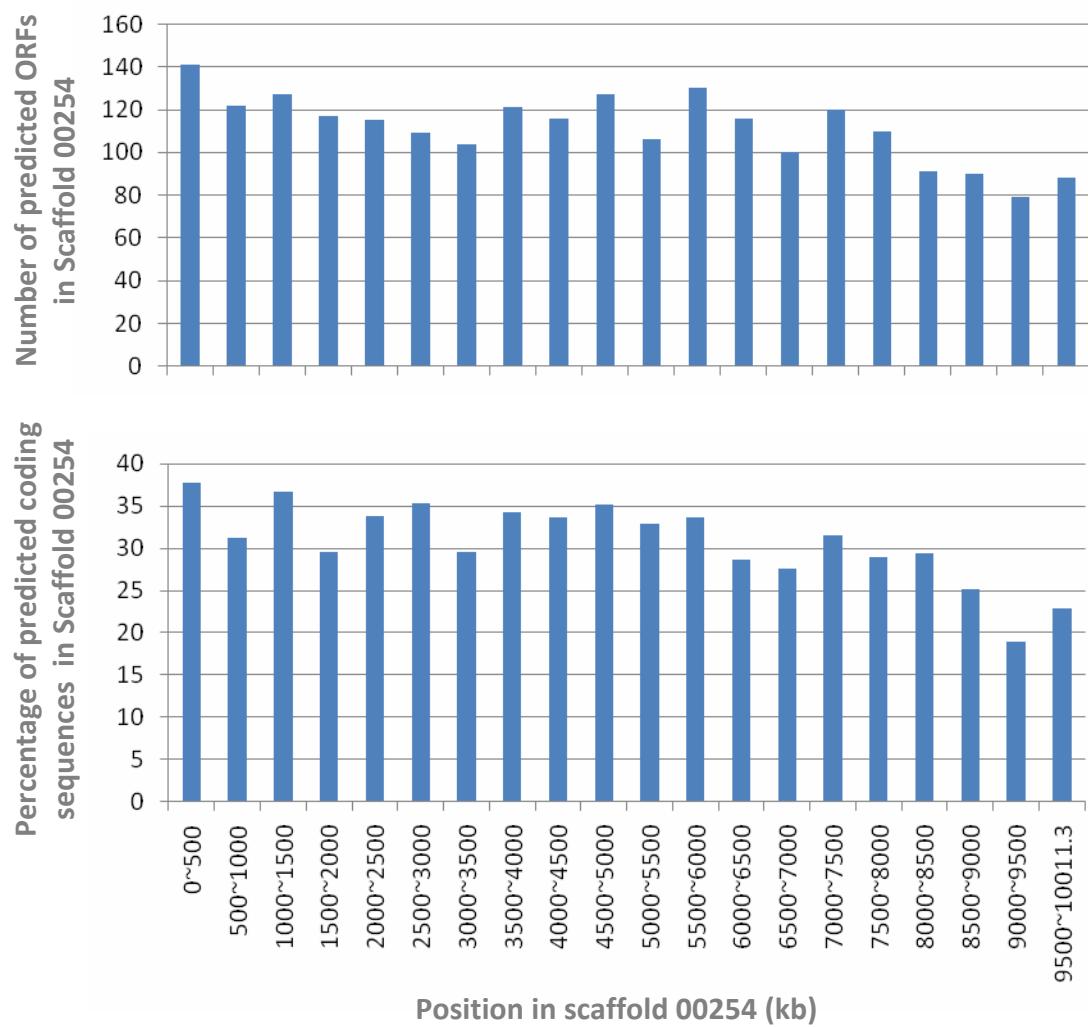

Supplemental Figure S1. Comparison of relative DNA contents by flow cytometry.
Flow cytometry was performed as described in the method. Relative values to
Arabidopsis are represented. Error bars indicate standard deviation from three repeats.

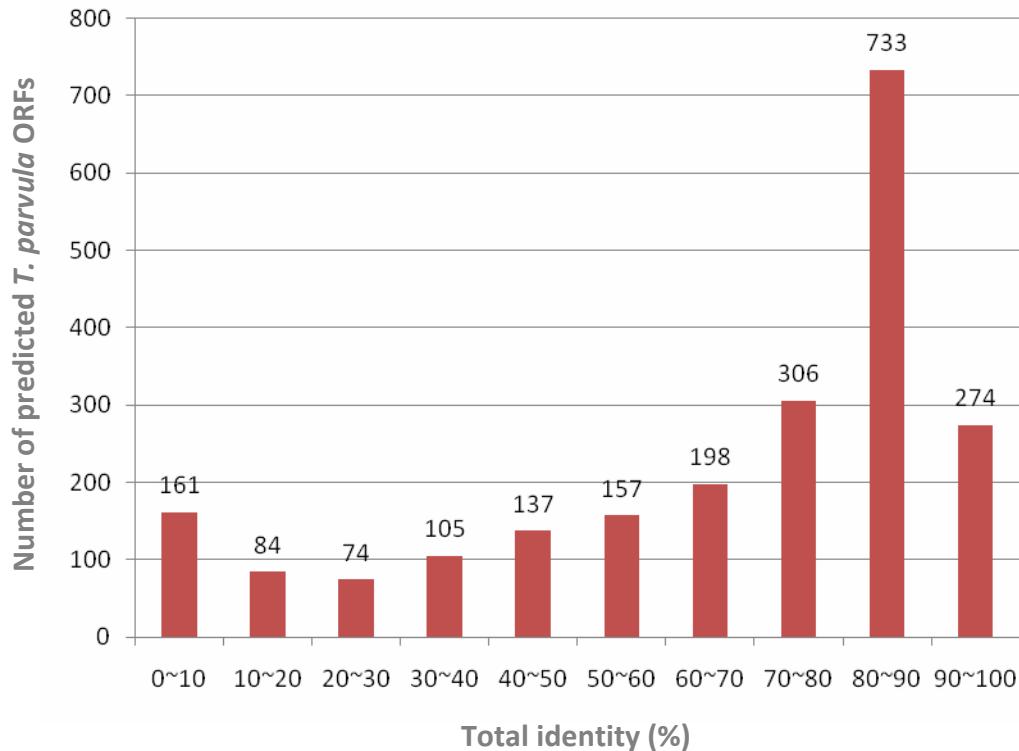

(A)

(B)

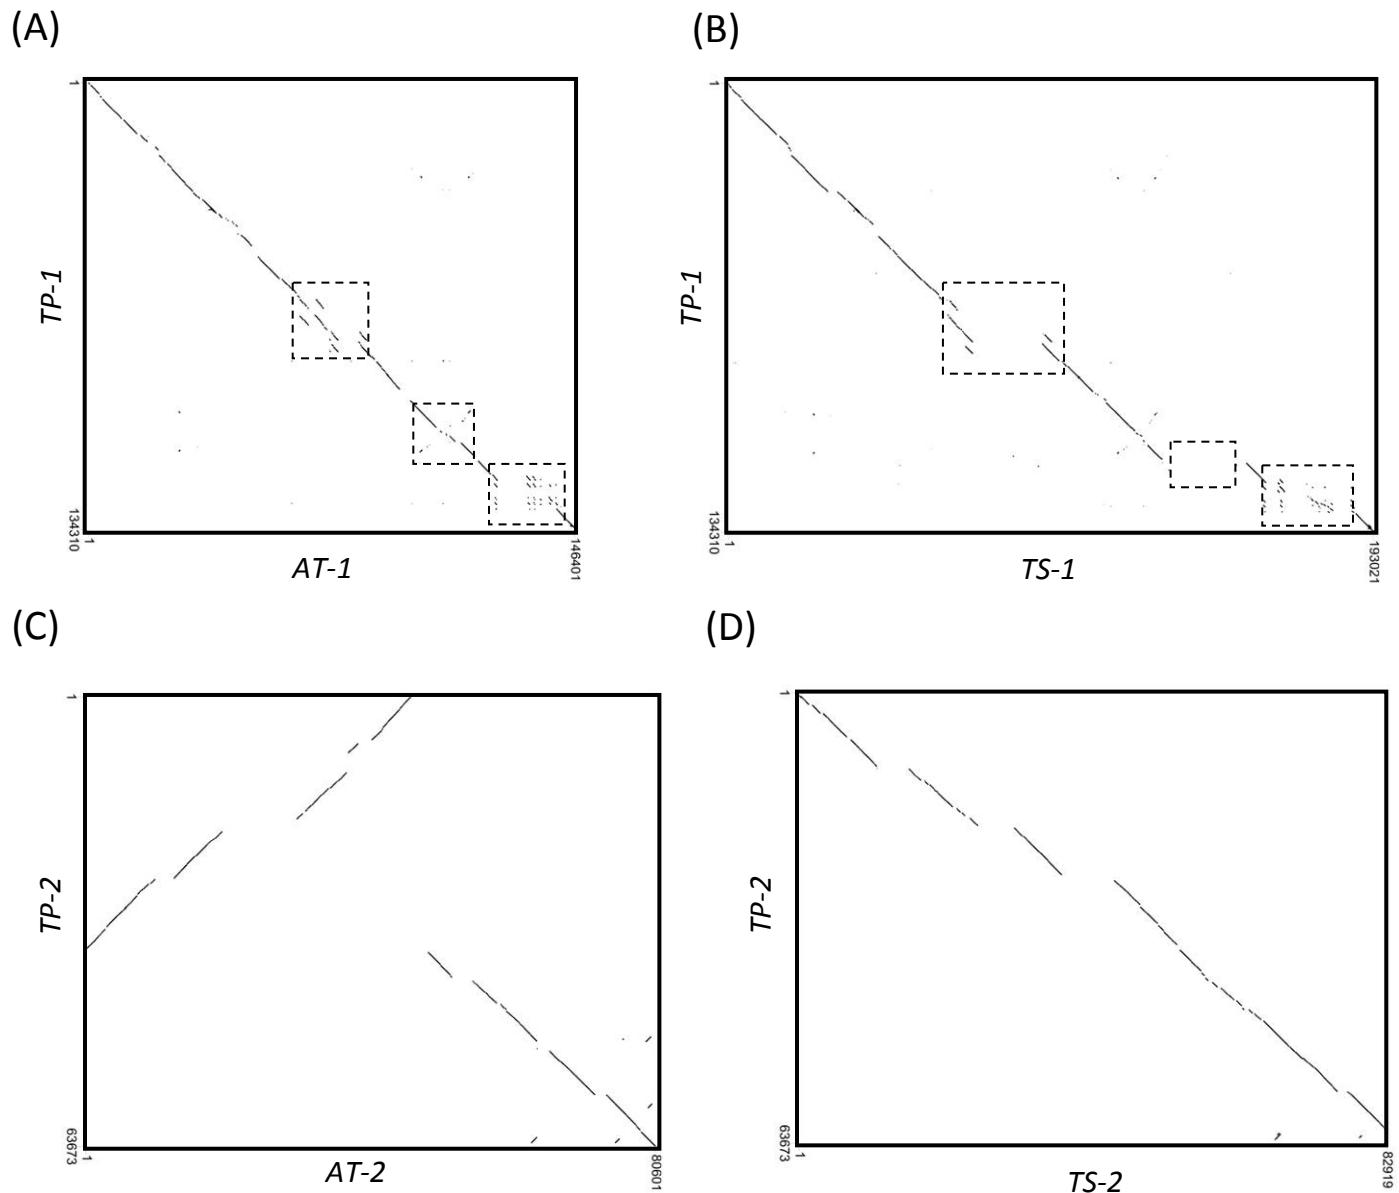

(C)

Supplemental Figure S2. Analysis of scaffold 00254.

Distribution of repetitive sequences (A) and ORFs/coding sequences (B) predicted by Repeatmasker and FGENESH, respectively, in scaffold 00254.

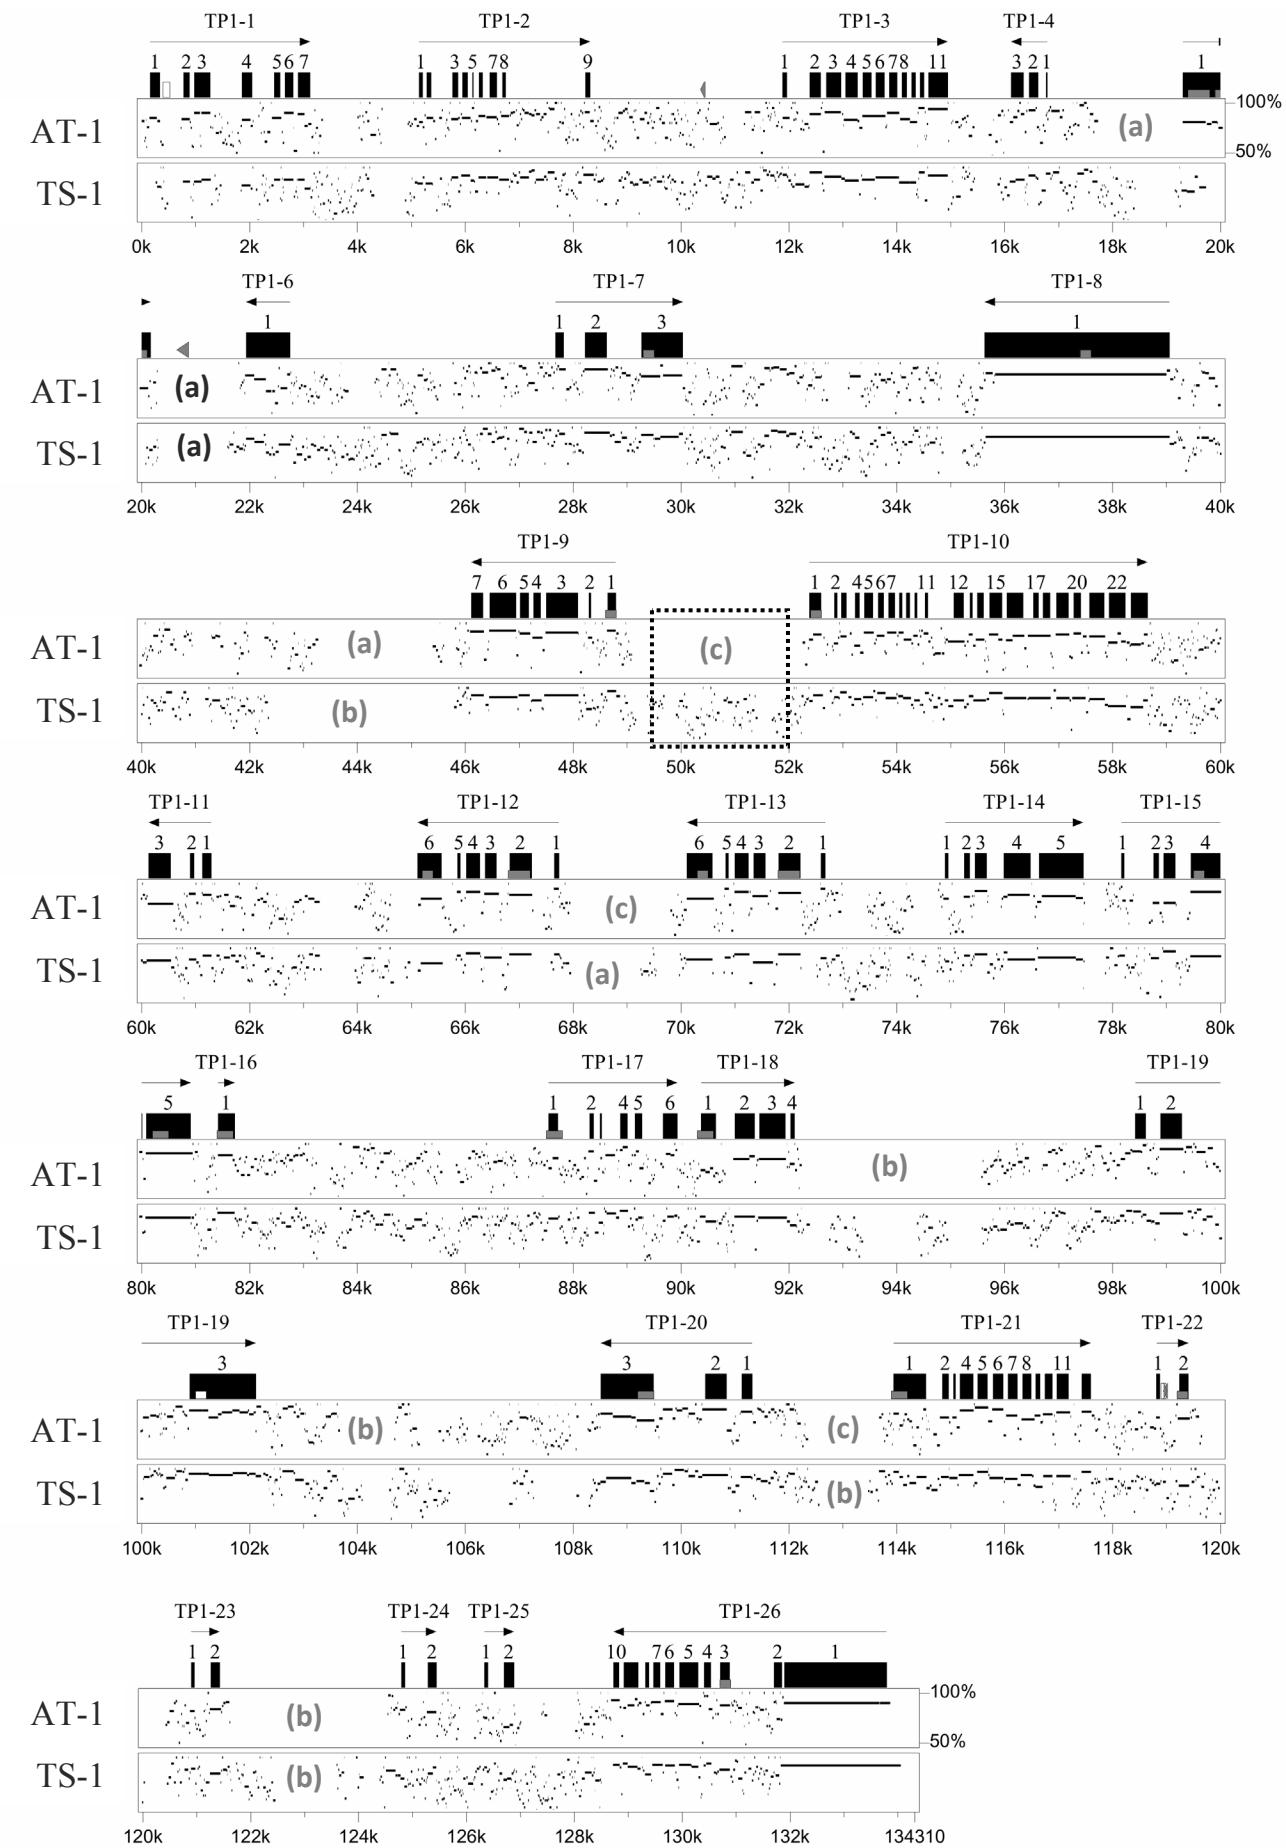

(C) Homology of predicted ORFs in scaffold 00254 compared to *A. thaliana* reference mRNAs. Total identity was calculated by multiplying percentage of the *T. parvula* predicted ORF sequence covered by the blastn alignment with percent nucleotide identity.

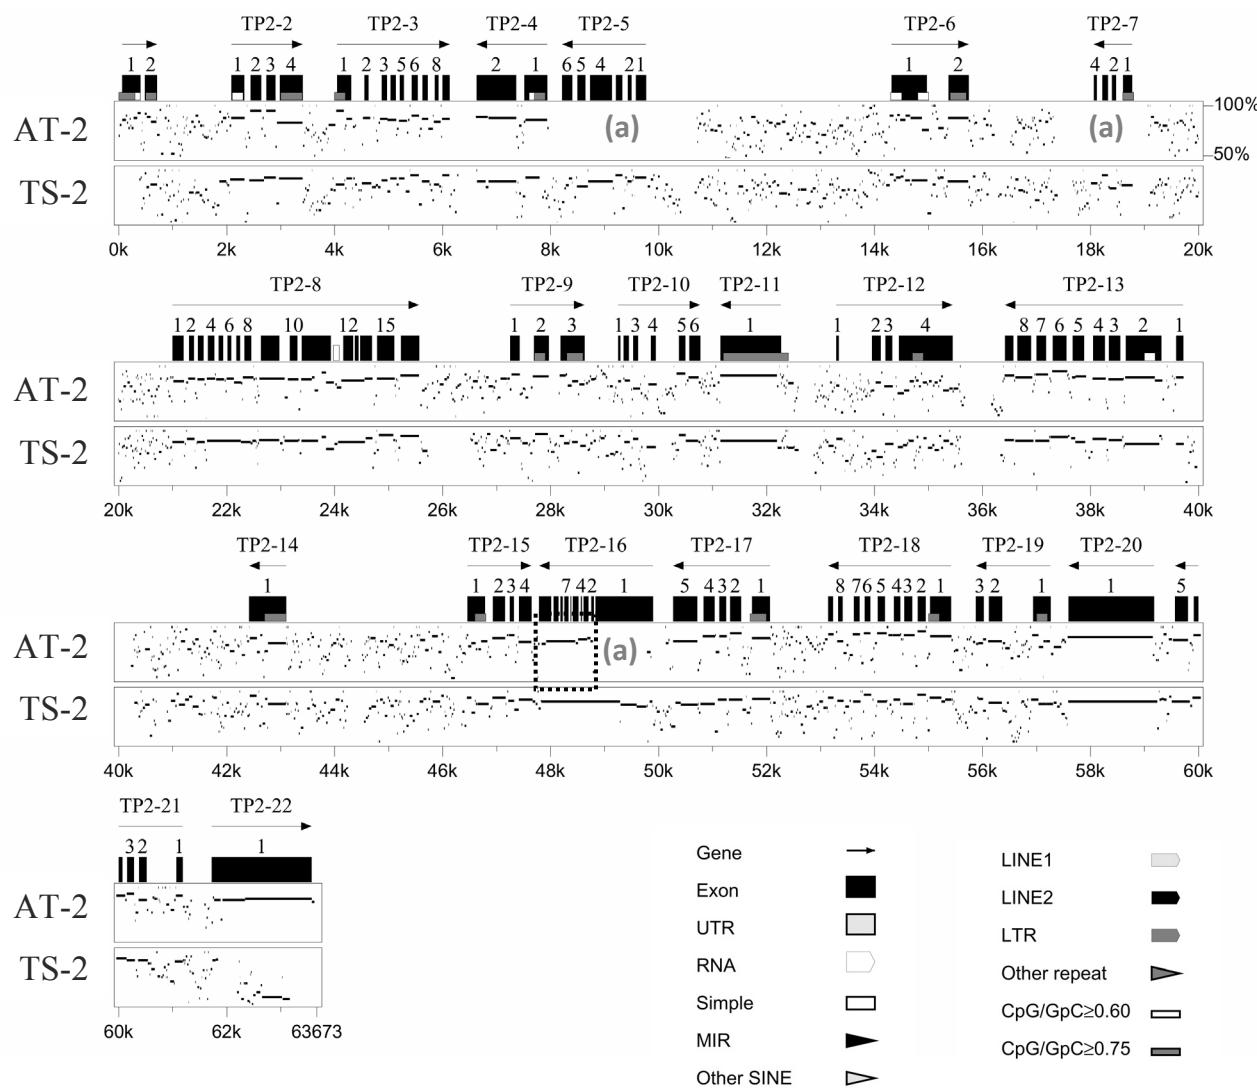

Supplemental Figure S3. Comparison between *T. parvula* genomic sequences TP-1 and TP-2 with three orthologous genomic regions in *A. thaliana* and *T. salsuginea*.

AT-1 (A) and AT-2 (B) are from *A. thaliana* and TS-1 (C), TS-2 (D) from *T. salsuginea*. Comparisons were made using dot-plot analyses with word size 7. In (A) and (B), boxes indicate regions where linearity is broken. In (C), a and b denote an inversion and the extent of the collinear region, respectively.

(A)

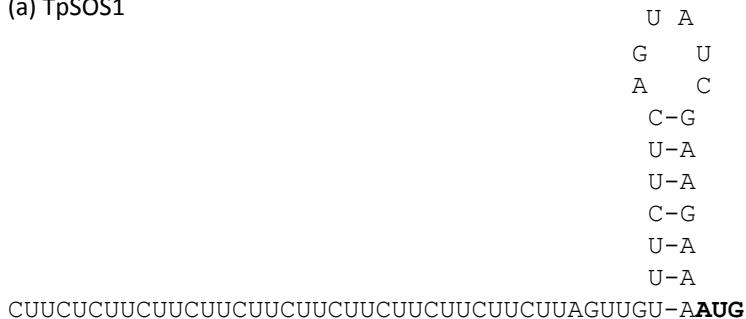

(B)

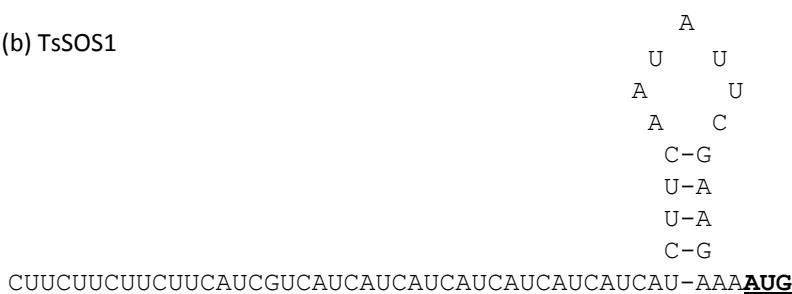

Supplemental Figure S4. Syntenic relationships and homologies of sequences represented by percent identity plots (pip).

TP-1 (A) and TP-2 (B) were compared to their orthologous regions in *A. thaliana* and *T. salsuginea* using PiPmaker plot with a word size of 7 (Schwartz et al., 2000). Predicted exons for the ORFs in TP sequences and the direction of transcription are indicated. Dashed box in (A) denote the intergenic space between SOS1 and its 5' neighboring gene. For the explanation of symbols (a-c) see the text.

Supplemental Figure S5. Hairpin structures in the 5'UTR of the halophytic *TheLLungiella* species.

Hairpin structures that can potentially form adjacent to ATG in the 5'UTR of (a) *T. salsuginea* and (b) *T. parvula*. No such structure exists in *A. thaliana* (c). The ATG codon is located at the 3' end of the sequence. The structures are predicted using RNAfold (Gruber et al., 2008).

Supplemental Figure S6. Comparison of CT tracts in the 5'UTRs of various genes between the three species

5'UTR sequence alignments of selected gene sequences related to abiotic stress. The (CnTn)n repeats are highlighted in gray. The initiation codon ATG is at the 3' end of each sequence. AT reference numbers and TS GenBank accession numbers include HSC70 (AT3G09440 and AY524794), Cyclophilin (AT2G16600 and AY392408), and VP1 (AT4G21550 and GU253905).

Relative mRNA levels compared to those of an EF1 α gene (orthologs of AT5G04810)

Values represented were fold differences normalized with the untreated At samples.

Shaded are relative mRNA levels of SOS1 (orthologs of AT2G01980).

Supplemental Table S5. Known *cis*-elements in SOS1 promoter regions up to 2000bp upstream of the translation start site.

Frequencies in each species followed by positions are given in brackets (for frequencies of four or fewer only); negative numbers show sites on the opposite strand. Positions are counted from 5' end of the sequence and position 2000 refers to the base pair immediately upstream to the start codon. Promoter sequences were searched against PlantCare database (Rombauts et al., 1999), PlantProm database (Shahmuradov et al., 2003), PlantPAN (Chang et al., 2008), and PLACE database (Higo et al., 1999).

Athb-9	5	15	5	NNNNNTAATGATTRCNYBS	binds homeobox HD-ZIPIII proteins
MYB4	2 (-49, 681)	0	1 (214)	AMCWAMC	binds myb At4g38620
Myba	1 (1029)	0	0	CGGTTG	binds Myb proteins
PtMYB4	1 (-1095)	0	0	ACCTACA	binds PtMYB4
p33TCP20 BS1	0	0	1 (- 1254)	GCCCG	binds TCP proteins involved in growth and development
EVENINGAT	0	1 (-840)	1 (-891)	AAAATATCT	circadian control; "EE (evening element) motif"
CCA1 motif (2)	0	0	2 (889,- -928)	AAAAATCTA	circadian regulation; binds CCA1
LTR	1	1 (1535)	0	CCGAAA	cold induction
LTRECOREATCOR15	1 (-798)	0	2 (116, 183)	CCGAC	cold responsiveness
GA-3	0	0	1 (1202)	AGAAAGGAA	control ovule identity; binds BPC1
ARR10	0	2 (353, 840)	3 (546, 763, 891)	AGATHHKN	cytokinin induction; binds At4g31920
TC-rich repeats	0	2 (560, 890)	1 (1057)	GTTTCTTAC	defense and stress responsiveness
AtMYC2	0	3 (-426, 788, 829)	1 (871)	CACATG	dehydration and abscisic acid responsiveness; binds AT1G32640
DRE 2	1 (-1784)	0	0	GCCGAC	dehydration responsiveness
MYCATERD1	0	6	1 (-871)	CATGTG	dehydration responsiveness; Myc recognition
MYB1AT	2 (510, 546)	1 (462)	0	WAACCA	dehydration-responsive; binds myb proteins
MYCCONSENSUSAT	4 (96, 424, 430, 903)	4 (426, 788, 829,	2 (248, 871)	CANNTG	dehydration-responsiveness; Myc recognition

WA	1 (336)	1 (27)	1 (435)	GGTCAAA	disease resistance; binds WRKY1
PB1	0	1 (-1429)	0	TGCAAAAG	endosperm specific induction; binds BPBF
TA-rich region	0	1 (1460)	0	TATATATATATATATATATA	enhancer
Motif VI	0	0	1 (-1670)	TGGTCC	epicotyl-specific nuclear factor
ERE	0	2 (-935, -1152)	1 (-818)	ATTTCAAA	ethylene responsiveness
ACGTAT ERD1	2 (227, 904)	2 (415, 583)	4 (71, 99, 186, 824)	ACGT	etiolation-induced expression of erd1 (early responsive to dehydration)
CARG AT CONSENSUS	1 (534)	1 (506)	0	CCWWWWWWGG	found in AtSOC1 MADS-box flowering-time gene
GAREAT	0	1 (-846)	1 (-897)	TAACAAR	GA-responsiveness
GARE-motif	0	2 (614, 1507)	0	AAACAGA	gibberellin-responsive element
HSE	0	0	2 (-1601, -1732)	AAAAAAATTTC	heat stress responsiveness
HEXAMERATH4	1 (-45)	0	0	CCGTCG	hexamer motif of At histone H4
circadian	1 (1451)	1 (-1679)	2 (1210, -1584)	CAANNNNATC	involved in circadian control
GT2	0	0	1 (-784)	GGTAATTA	light down regulation and dark induced; binds DF1
ACE	0	0	2 (598, 1075)	AAAACGTTA	light responsiveness
GA-motif	0	1 (652)	1 (-854)	AAAGATGA	light responsiveness
GT1 motif	1343	0	0	AATCCACA	light responsiveness
ATCT-motif	0	0	-551, -876, -915	AATCTAACATCT	light responsiveness
GAG motif	1 (-875)	0	0	AGAGATG	light responsiveness
box 4	4 (1038, 1712, 1231, 1839)	2 (845, 1762)	1 (938)	ATTAAT	light responsiveness
G-box	0	1 (-1562)	1 (-1162)	CACGTA	light responsiveness
GATA-motif	0	1 (-727)	0	GATAGGA	light responsiveness
CATT motif	1 (1949)	0	0	GCATTC	light responsiveness
GT1CONSENSUS	14	11	10	GRWAAW	light responsiveness
TCT-motif	1 (-1437)	1 (894)	0	TCTTAC	light responsiveness
I-box	1 (1817)	1 (1678)	-787	TGATAATGT	light responsiveness
box 1	0	3 (-935, -1152, -1144)	5	TTTCAAA	light responsiveness
AT1-motif	0	1 (845)	0	ATTAATTTACA	light responsiveness and shoot specific expression

as-2-box	1 (-1697)	8	0	GATAATGATG	light responsiveness and shoot specific expression
AE box 2	0	0	1 (-1985)	AGAAACAA	light responsiveness; binds AEF
AE box 1	1 (84)	0	0	AGAAACTT	light responsiveness; binds AEF
GATABOX	12	9	14	GATA	light responsiveness; binds ASF-2; in LHCII type I Cab genes
GBF1 BS3	1883	0	0	ACACGTGT	light responsiveness; GBF1
GBF1 BS8	0	1 (1562)	0	TTACGTGT	light responsiveness; GBF1
CGTCA-motif	0	3 (-657, 1955, 1223)	2 (-520, -1791)	CGTCA	MeJA-responsiveness
MBS	0	4 (641, 1038, -1058, -1088)	0	TAACTG	MYB binding site involved in drought-inducibility
MYBCORE	2 (48, -452)	3 (-58, 78, 108)	0	CNGTTR	myb recognition
S1	0	1 (435)	0	ATGGTATT	negative regulation, binds S1F
SORLIP3AT	0	2 (492, -495)	1 (289)	TGTATATAT	one of "Sequences Over-Represented in Light-Induced Promoters (SORLIPs)"
CCA1	0	0	1 (763)	AAMAATCT	phytochrome regulation of an AtLhcb; binds myb AT2G46830
RHERPATEXPA7	1 (-227)	0	0	KCACGW	Root Hair-specificity
WBOXATNPR1	1 (-504)	0	2 (-129, 821)	TTGAC	salicylic acid (SA)-induction by WRKY
TCA-element	0	1 (-1909)	0	GAGAAGAATA	salicylic acid responsiveness
SEF3 BS 1	0	0	0 (-1387)	CACCCA	seed specific enhancer; binds SEF3
SURECOREATSULTR11	0	1 (-417)	1 (-755)	GAGAC	sulfur-responsive element (SURE) in SULTR1
SV40COREENHAN	0	1 (388)	0	GTGGWWHG	SV40 core enhancer

5G60390(1090R) ^a	TCTGACCAGGGTGGTCATGATGAT	Fig 5 (B) and 6

^a used for the reference gene in all qPCR.

Primers for the reference genes shown in Figure 5 (A) were the same as Oh et al. 2009.

Oh DH, Leidi E, Zhang Q, Hwang SM, Li Y, Quintero FJ, Jiang X, D'Urzo MP, Lee SY, Zhao Y, Bahk JD, Bressan RA, Yun DJ, Pardo JM, Bohnert HJ (2009) Loss of Halophytism by Interference with *SOS1* Expression. Plant Physiol 151: 210-222
