

Table S5 MGI mouse phenotypes identified by ALIGATOR analysis of the AD GWA data of Harold and colleagues (7)

The 589 genes identified as having GWAS SNP signals $p < 0.001$ were used: APOE was included in the gene list. In this analysis one SNP was not allowed to add more than one gene to any phenotype.

"Study-wide p-value" is the probability of obtaining by chance at least one mouse phenotype with a phenotype-specific enrichment p-value at least as significant as that observed.

Phenotype number	total genes in pathway	#genes on list	expected #genes on list	p-value	Study-wide corrected p-value	Function
