

Figure S3: The effect of β -glucosidase on artemisinic acid-12- β -diglucoside. (A) Total ion count mass chromatograms and (B) chromatograms at $m/z = 791.5$. Represented are chromatograms of artemisinic acid-12- β -diglucoside treated with control (thin line) or β -glucosidase (bold line). The peak at $R_t = 28.0$ min represents artemisinic acid-12- β -diglucoside, the peak at $R_t = 53.2$ min represents artemisinic acid monoglucoside.
