Appendix 2 (as supplied by the authors): Mean percentage change (and standard deviation) from baseline in (A) ratio of total to HDL cholesterol ($p = 0.025$), (B) ratio of apolipoprotein B to apolipoprotein AI ($p = 0.046$), (C) total cholesterol ($p = 0.24$), and (D) triglyceride ($p = 0.92$) with dietary portfolios having high and low levels of monounsaturated fatty acid (MUFA). Significance of differences between treatments was determined by repeated-measures analysis.
