**Figure S6** The percent consistency (PC) of the parameters obtained from different degree of strictness (0.5SD ($m = 0.5$) (a) and 2SD ($m = 2$) (b)) to classify the sensitive parameters ( based on $S^{size}$ and $S^{choppy}$) was plotted according to the (1) genes and molecular processes (2) (TL= translation and T = Transportation). The consistently sensitive parameters marked as black bars were classified based on 50 percent consistency cut-off.
