^a Location and enzyme data taken from refs. 1-4; numbers indicate tRNA nucleotide position, with the number of occurrences in yeast tRNA in parentheses; bold: anticodon (positions 34-36); underlined: positions within the anticodon loop (positions 31-39).

^b “Qty”: change in the level of the ribonucleoside caused by the agent; “Tox”: loss of the secondary modification biosynthetic gene causes to sensitivity to the agent
