

Supplementary Figure 1.

Supplemental figure 1. Effects of PPAR α ligands on the mRNA levels of PPAR α and PGC-1 α . Hepatocytes isolated from mice were treated with 1, 2, 10 μ M or 20 μ M Wy14,643 (A and B) or fenofibrate (C and D), respectively for 24 h. PPAR α (A and C) and PGC-1 α (B and D) mRNA levels were measured by qPCR. E, Effect of dexamethasone on the PPAR α mRNA levels was measured by qPCR as indicated. All the mRNA levels were normalized to Rplp0 mRNA levels.
