Supplemental figure 2: Ghrelin (white columns) and GHS-R (black columns) expression in pituitary of male and female wild-type (SST-intact controls mice shown by the dotted line set at 100%) compared to male and female SST-KO mice, as assessed by qRT-PCR. Values represent the mean \pm SEM of 4-7 mice/gender/tissue. Asterisks (*, $p < 0,05$) indicate values that significantly differ from SST-intact within gender.
