Additional file 4 - results on knockout data of 128 TFs.

Available online at http://eng.scbit.org/pages/doc/supp_file_1.rar.

The supplementary includes 128 files. Each file contains the results on one perturbed TF experiment. For example, the file "YKL109W_HAP4" lists the results on the HAP4 knockout data. The number of downstream genes of TF in each model, the number of DEGs, the number of the overlap between downstream genes and DEGs, the overlap p-values obtained in each model, the minimum overlap p-value from the six models and the minimum p-value from acceptable models are listed in each file.
