

Supplementary Figure S1

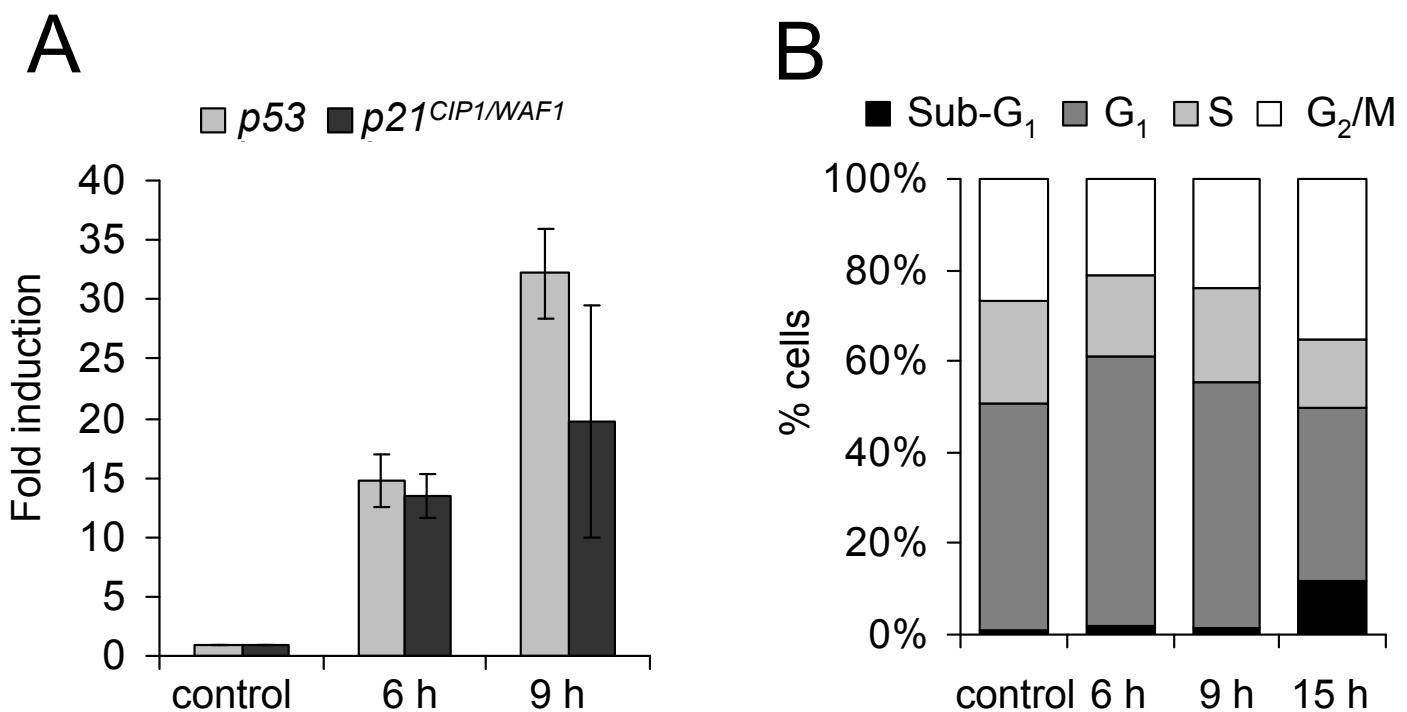

Figure S1

Induction of p53wt or p53mut in D53 cells. Cells were induced and harvested at different time points. (A) $p53$ mRNA and the regulation of $p21^{CIP1/WAF1}$ were measured via real-time RT-PCR. $GAPDH$ expression was used to normalize expression levels. (B) In order to control for comparable cell cycle distribution during p53wt induction, DNA was stained with propidiumiodide and analyzed by FACS.

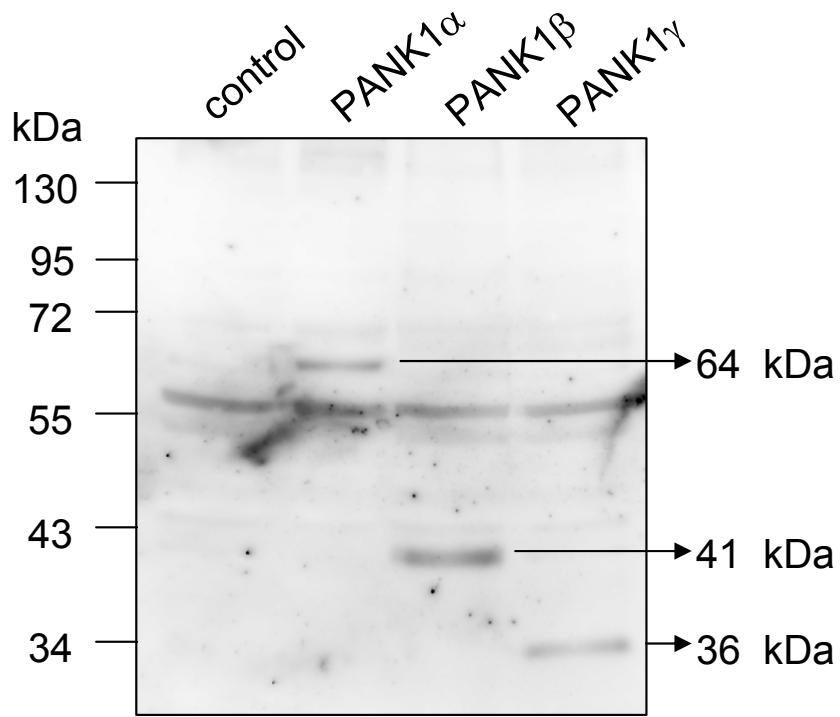

Figure S2

Western analysis with a PANK1 antibody detecting all three known PANK1 isoforms. Different expression plasmids or the control vector pcDNA3.1(+) were transfected into HCT116 cells. 24 h after transfection cell lysates were separated by SDS-PAGE and PANK1 was detected. The calculated molecular weights of the three different known PANK1 isoforms are given.

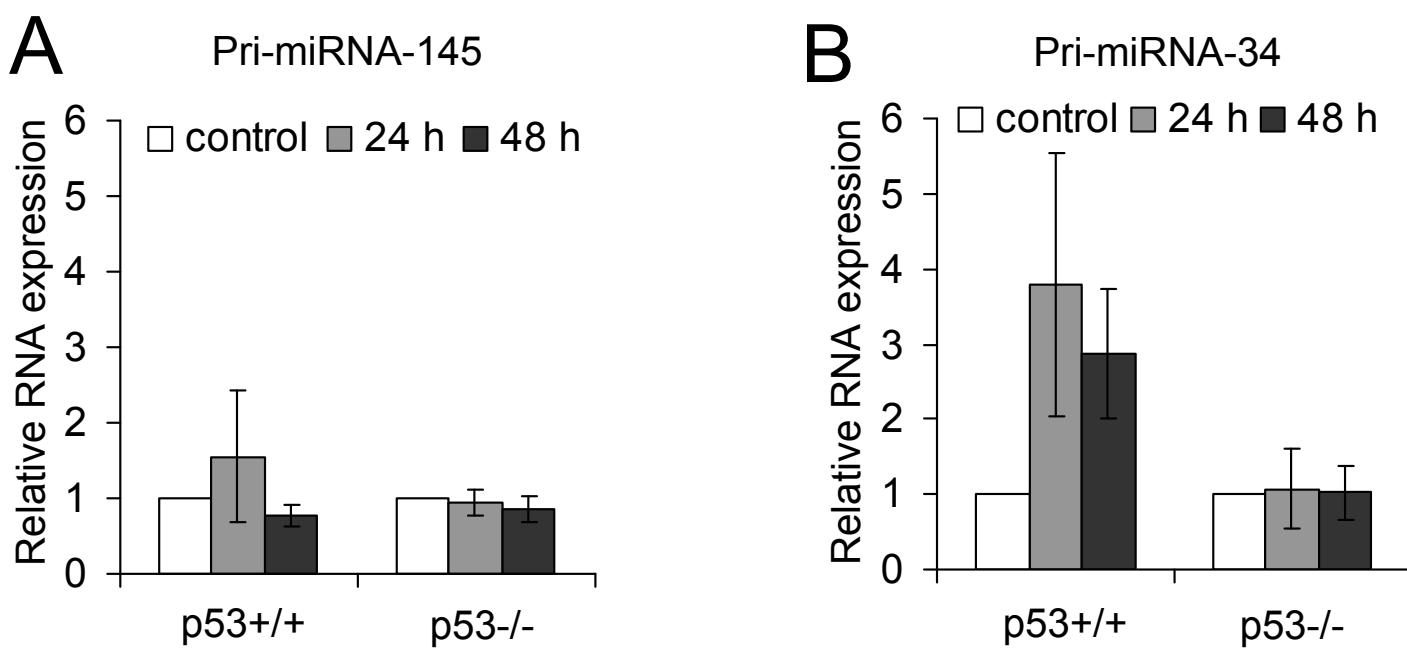

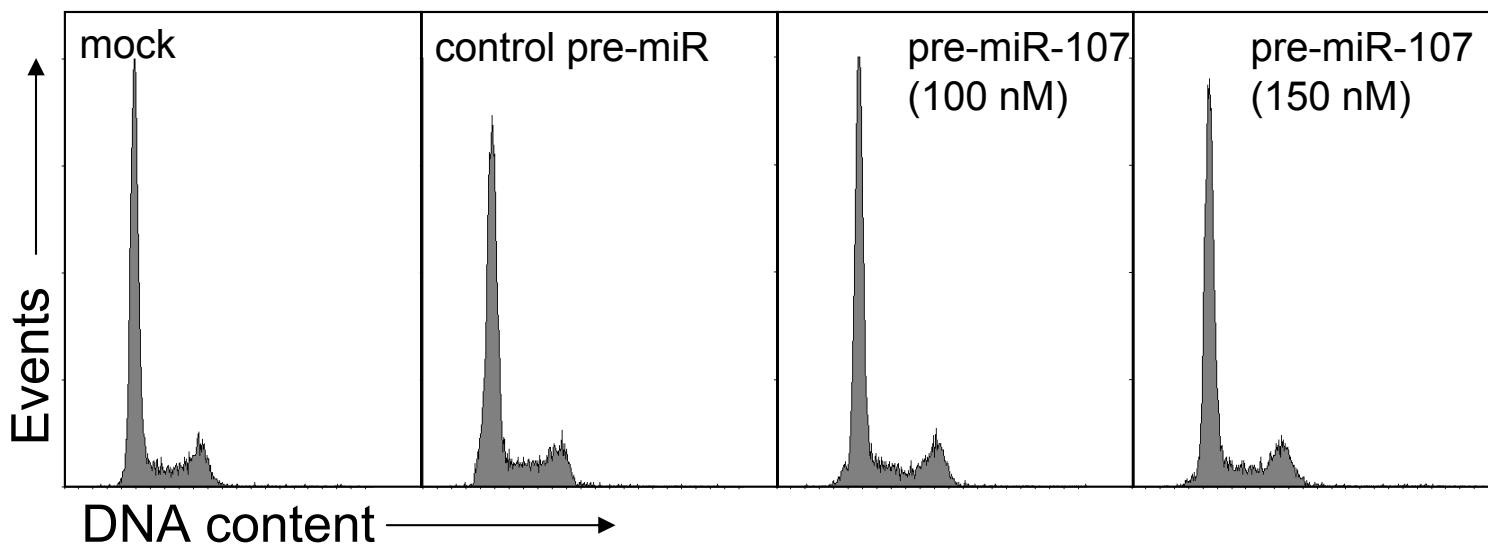

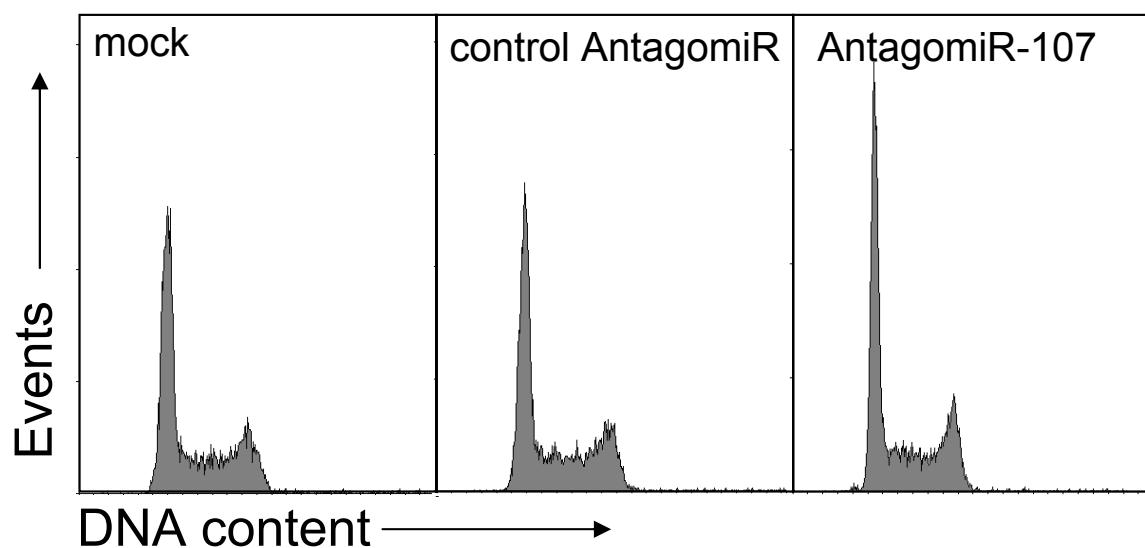

Figure S3

Regulation of other pri-miRNAs in the HCT116 cell system. (A) Expression of pri-miRNA-145 after treatment with doxorubicin. (B) pri-miRNA-34 expression served as a positive control for the transcriptional regulation by wild-type p53.

A**B****Figure S4**

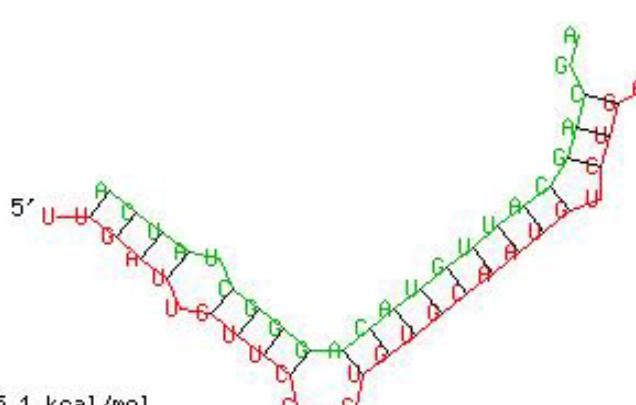

Cell cycle distribution of D53wt cells after transfection of miRNA mimic and AntagomiR. (A) FACS analyses after transfection of controls (mock, control pre-miR) and overexpression of miRNA-107. (B) FACS analyses after transfection of AntagomiR-107 or controls.

Figure S5

(A) Putative miRNA-107 binding site in the 3'-UTR of p130 predicted by the RNAhybrid algorithm. Minimum free energy (mfe) is given for the mRNA-miRNA interaction. (B) 3'-UTR Luciferase reporter assays were carried out after cotransfection of D53wt cells with Luciferase-UTR reporter and control pre-miRNA (control) or pre-miRNA-107. Empty pGL4.10 vector served as a negative control.
