

Supplemental Figure. 1. Summary of synaptology of α - and γ -MNs in intact, ST-Non-Tr and ST-Tr rats. Diagrams were constructed based on the average MN size, percent coverage and number of each bouton type, and the average mean diameter of α - and γ -MNs. Pie diagrams illustrate the proportion of the total number of boutons associated with each synaptic type for α - and γ -MNs of all groups.

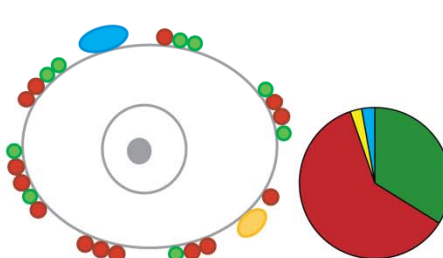

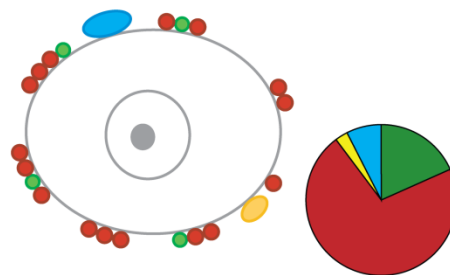

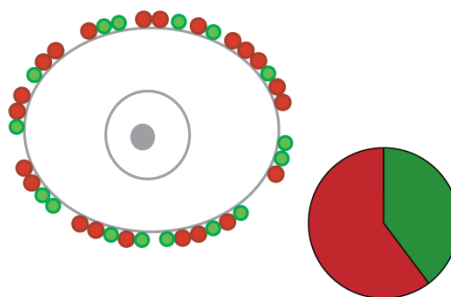

A

alpha-MN

B

gamma-MN

F-bouton S-bouton C-bouton M-bouton
