

Supplemental data

SUPPLEMENTAL FIGURE S1. Interaction of TBK1 with TAPE. 293T cells were transfected with mTBK1 together with pEGFP-N1, hTAPE-EGFP or its deletion mutants. Expression of hTAPE and its deletion mutants were examined by western blot (*left panel*). Interaction of mTBK1 with hTAPE and its deletion mutants was examined by the IP-WB analysis (*right panel*).

SUPPLEMENTAL FIGURE S2. TAPE is critical for TLR3-mediated RANTES production. 293 cells treated with indicated siRNAs were transfected with TLR3, and then stimulated with poly(I:C) (50 μ g/ml). Supernatants were measured by ELISA for RANTES production. Values represent the mean \pm SEM of triplicate samples.
