Supplemental Figure 2

Supplemental data

Figure 1: Vascular characteristics of CaMKII $\delta^{/-}$ mice. (A) Quantitative rt-PCR for CaMKII γ and δ expression in the aorta of wild-type and CaMKII $\delta^{/-}$ mice (n=4/group). Values are presented relative to wild-type. (*p<0.05) (B) Systolic blood pressures were measured by tail cuff method in CaMKII $\delta^{/-}$ mice and controls at baseline or after infusion of 1.25 μ g/kg/min Ang-II for 14 days (n=5-6/group). (C) Immunoblots for CaMKII in the aorta. The lower band (~52 kD) represents CaMKII δ and is absent in CaMKII $\delta^{/-}$ -aorta.

Figure 2: CaMKII isoform mRNA expression in VSMC. CaMKII γ and δ mRNA expression in CaMKII $\delta^{/-}$ and wild-type VSMCs. The expression levels are adjusted to ARP and displayed as ratios relative to wild type.
