

Supplemental Figure 1

Supplemental Figure 1. Western blotting for SR proteins from wildtype skeletal muscle or from SERCA1 Tg mice for each of the indicated proteins (N=4 mice each). Abbreviations: RyR1, ryanodine receptor; DHPR, dihydropyridine receptor (L-type Ca^{2+} channel); CSQ, calsequestrin. No significant changes were observed in expression of any protein between Wt and Tg, as assessed after quantitation and statistical analysis.
