H	1-TC	0.15	0.20	-	-	-	22	174	p<0.0001
	2-TC(1)	0.67	7.97	1.69	0.20	8.62	7	146	
I	1-TC	0.03	0.18	-	-	-	19	205	ns
	2-TC(1)	0.03	0.20	0.21	1.60	0.13	19	209	
J	1-TC	0.02	0.26	-	-	-	85	219	ns
	2-TC(1)	0.02	0.27	0.01	0.17	0.07	85	223	

1-TC, one-tissue compartment model; 2-TC(1), unconstrained two-tissue compartment model; SS, residual sum of squares; AIC, Akaike information criterion; ns, not significant.

Linear regression analysis of binding parameters obtained with different methods

Table S2. Linear regression analysis of V_T and BP_{ND} estimates obtained with different methods.

Parameter	Method 1	Method 2	All regions			Pallidum excluded		
			Slope	Intercept	r^2	Slope	Intercept	r^2
V_T	1-TC	2-TC(2)	0.975	0.004	0.998	0.983	0.001	0.999
	Logan	2-TC(2)	0.951	0.014	0.993	0.979	-0.0003	0.999
	Logan	1-TC	0.973	0.015	0.993	0.995	0.004	0.998
	SRTM	2-TC(2)	0.845	0.024	0.899	0.837	0.019	0.917
	Logan	2-TC(2)	0.735	0.135	0.861	0.852	0.003	0.931
	Logan ref	2-TC(2)	0.703	0.175	0.810	0.849	0.003	0.923
	Logan ref	Logan	0.959	0.043	0.947	0.999	-0.003	0.996
	Logan	SRTM	0.862	0.124	0.939	1.006	-0.004	0.991
BP_{ND}	Logan ref	SRTM	0.817	0.172	0.871	1.009	-0.010	0.994

1-TC, One-tissue compartment model; 2-TC(2), two-tissue compartment model with fixed K_1/k_2 ratio; Logan, Logan linear graphical analysis with arterial input; Logan ref, Logan linear graphical analysis with reference tissue; SRTM, simplified reference tissue model. Slope and intercept were determined by linear fit of (Method 1) = slope * (Method 2) + intercept, including data for 9 subjects.

Stability of V_T for PET measurement duration

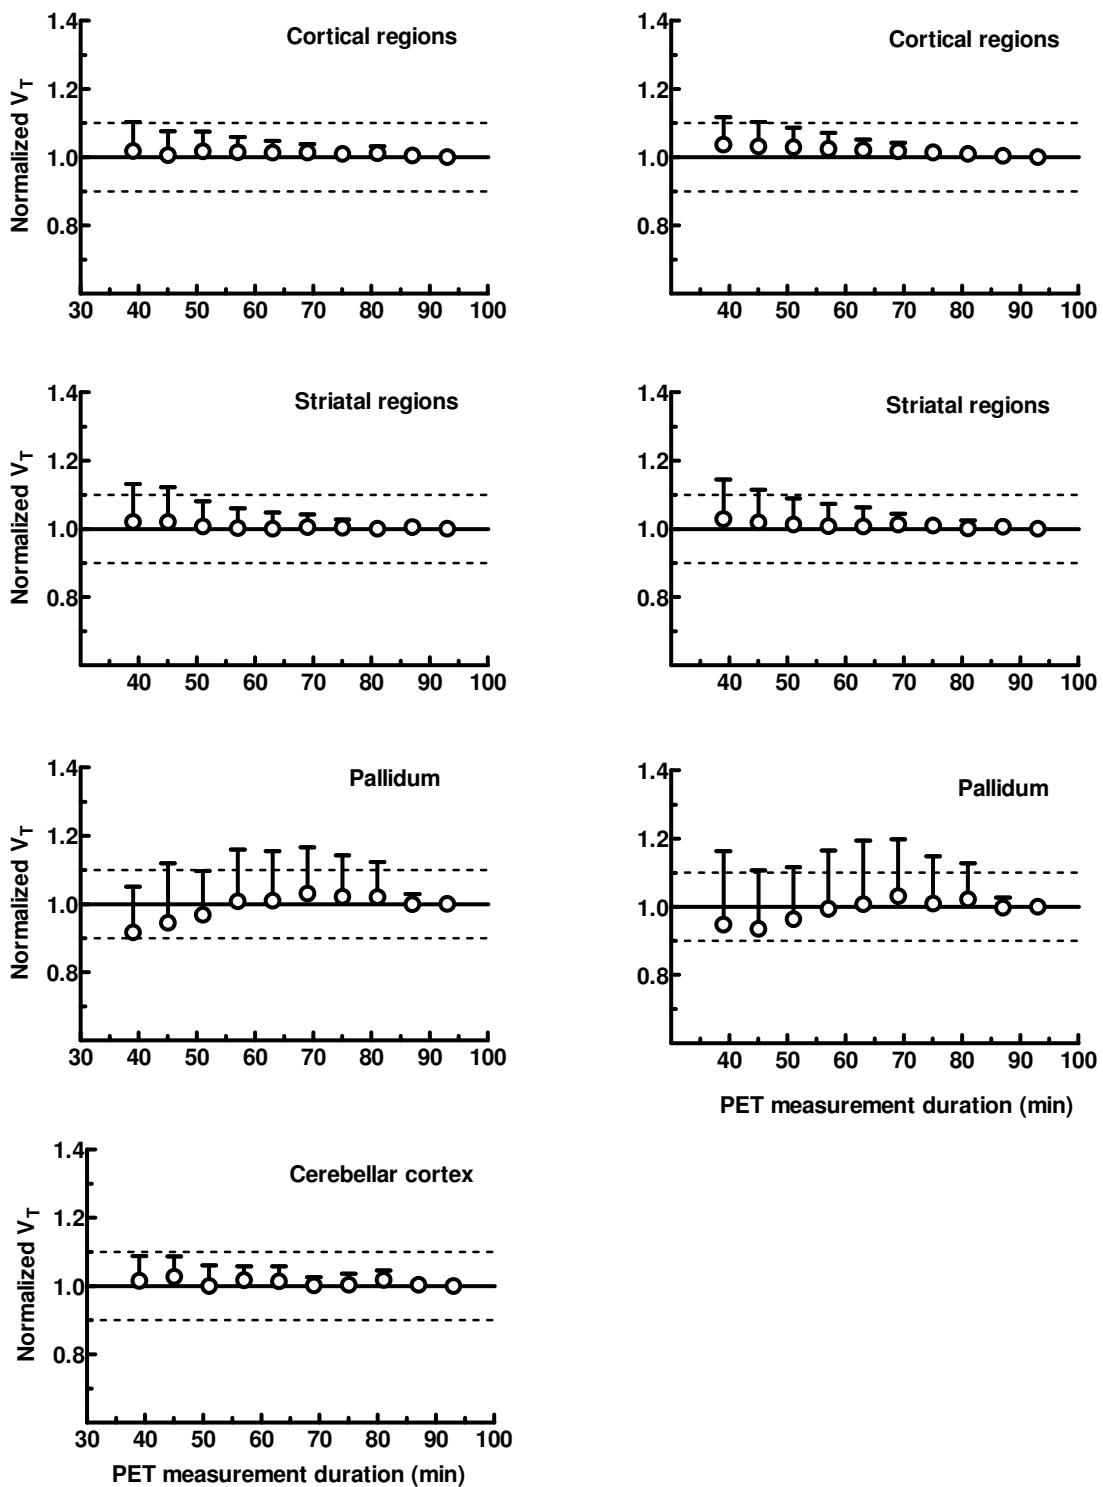

Figure S1. Time stability of $[^{11}\text{C}]$ AZ10419369 V_T values obtained by the one-tissue compartment model (left panel) and the two-tissue compartment model with fixed K_1/k_2 ratio (right panel). Values are expressed relative to V_T obtained with a 93 minute PET measurement. Data points and error bars represent mean and SD, respectively.
