

Supporting Table S1

Candidate 8^{*}Cys mouse peptides with $[M+H]^+$ monoisotopic masses of m/z 2753.028 \pm 50 ppm.

#ID	Protein name	Amino acids	Peptide sequence	theoretical m/z ¹	Δ Mass	Δ PPM
ENSMUSG00000050440	Hepcidin-1	58-83	DTNFPICIFCKCCNNSQCGICCKT	2753.0236	0	0
ENSMUSG00000031765	Metallothionein-1	94-122	LTSSSSFLGCCS CCPVGCSKCAQGCVCK	2753.0447	-0.021	-7.68
ENSMUSG00000069583	Keratin associated protein 12-1	29-56	CQASCFVSSPCQPSCCVSSSCQSACCR	2752.9468	0.077	27.9
ENSMUSG00000031802	Per-hexameric repeat gene 4	2-25	CIYVCGVCLCVCFSVCMCVHVLCVY	2753.1078	-0.084	-30.6
ENSMUSG00000063251	Keratin associated protein 4-1	6-27	G SVCSEESCGQGCCQPSCCQTTCCRTT	2752.8951	0.128	46.7
ENSMUSG00000049593	Late cornified envelope 1H	35-67	KCPPVSSCCSLGS GGCCGSSSGGCCGSSGGC	2752.8951	0.128	46.7

Note that monoisotopic $[+H]$ masses as measured by MALDI-FTICR are about 1 Dalton lower than the average mass measured by TOF MS.

¹Theoretical monoisotopic m/z values were calculated as a singly protonated precursor ion from a peptide that contains 4 disulfide bridges using the ChemCalc algorithm (www.chemcalc.org).
