

Supplementary Figure 4: Intermolecular NOEs between the protons of I412 of β CaNp and A88 protons of $^{13}\text{C},^{15}\text{N}$ -CaM₁₋₁₄₈. NOEs detected from the A88 C α (A-C) and C β (D-F). Shown are (A, D) ^{13}C filtered NOESY spectra (β CaNp protons), (B, E) HCCH-TOCSY spectra (CaM protons), and (C, F) ^{13}C NOESY spectra (all protons). Peptide shifts are indicated by black lines and text while CaM shifts are indicated in red. The arrow in panel D points to a weak intermolecular NOE.
