

Table S5. SNPs identified in conserved elements, HAS2 and HAS2 antisense after targeted sequencing.

The dogs used for targeted sequencing were as follows: Control 1= Pug, Control 2= Napolitan Mastiff, Control 3= Standard Poodle, Shar-Pei 1-2 are of meatmouth type and Shar-Pei 3-4 are of the traditional type. Seven SNPs in conserved elements around HAS2 and two SNPs (Chr 13: 23,348,686 and 23,379,995) in HAS2 and HAS2 antisense only appeared in the four sequenced Shar-Pei dogs and not in control breeds but excluded as causative for the breed-specific skin phenotype (hyaluronanosis) after further genotyping in more control breeds.

HAS2
