

Supplementary Information Figure Captions

Supplementary Figure 1. Characterization of polyamide **2**. a) Analytical HPLC trace at 310 nm. b) MALDI-ToF MS data. Expected mass: 1358.6; Observed mass: 1358.4. Characterization data for polyamides **1** and **3** have been previously published (Nickols, N. G., Jacobs, C. S., Farkas, M. E., and Dervan, P. B. (2007) Improved nuclear localization of DNA-binding polyamides, *Nucleic Acids Res.* **35**, 363–370.)
