

Supplemental Fig. S6. COX2 and  $\beta$ -catenin immunoreactivity in gastric cancer tissue.

Immunohistochemical images of gastric cancer samples showing moderate to strong levels of COX2 and  $\beta$ -catenin expression in different individuals (ID; see Supplemental Table 2 for details) analyzed as part of the Human Protein Atlas initiative (<http://www.proteinatlas.org>). COX2 and  $\beta$ -catenin proteins were visualized using the HPA001335 and the CAB000108 antibodies, respectively.
